Chapter 1

Introduction

Random notes on how coincidences or dreams can either delight or completely derail a man's life. It all started for him on 8 August 2013. He had suffered a minor gardening accident (a knee injury) that left him confined to bed, so he passed the time listening to YouTube seminars. Strangely enough, one featured Ingo Swann describing an experience of someone climbing and then falling. The Stargate Project had been enormously expensive; many still call it a colossal waste of money. He often pointed out that you cannot build proper science on vague anecdotes. How, he would ask, do we really know Saddam Hussein was located through remote viewing? Perhaps the intelligence services already had a way to track him continuously (maybe a chip implanted in his skull), and remote viewing was simply the cover story.

He liked to bring up the 1978 case when the Italian Prime Minister consulted a clairvoyant to find the building where Aldo Moro was held prisoner. It later turned out the place was crawling with foreign spies; the ones on the floor above had been lowering cameras from their balcony to watch everything.

All of this made the paranormal fascinating to him. He sometimes quoted Oppenheimer (or misquoted him, depending on who you ask): there will be no complete science until science can explain every paranormal phenomenon. Still, he noticed, people love to reach for paranormal explanations when life gets uncomfortable. Ideally, he said, there would be no spies in the world, and everyone would just be a little more scientific.

He remembered, from when he was roughly 8–10 years old, watching Hush... Hush, Sweet Charlotte with Bette Davis (whom he found incredibly beautiful in that film) alongside three other girls. That night he stayed up late in the courtyard, softly calling up to his friend Oriella's window: "Carlotta... Carlotta... Carlotta..." He later admitted it is disturbingly easy to frighten another human being. He grew up among farmers. They

taught him to read the weather, the humidity, to smell the air with bare feet planted firmly on the ground. At night his grandmother (his mother's mother) sometimes told him fairy tales about magical worlds, flying people, and ghosts. Those were stories; he never confused them with reality. His father used to say the only things worth fearing are living people. Yet when he saw his first dead body (his grandfather), he was terrified. For two or three weeks afterward he was afraid he would open his wardrobe and find the old man hanging there among the coat hangers. Then, at the midway point of life (41 years old), he woke up, as if he were a lost soul from Dante, in the middle of a dark wood (selva oscura), trying to work out who the shadowy figure was that had switched off all the lights. t felt to him like a virtual kidnapping. He was never sure who the kidnapper was, whether the kidnapper was real, or what the ultimate goal might be. Whoever or whatever it was, it struck him as extremely clever, operating according to a grand design. He recognized the patterns. Whatever the truth, he believed you can learn from every experience (real or apparently virtual). As soon as he arrived in Vietnam, he told a friend that he wanted to take remote-viewing classes, just to better understand what on earth was happening to him.

Perhaps the remote-viewing course is already happening on its own, night after night, in imaginary classrooms his mind keeps opening without permission. Over the years, his brain has elaborated over themes that dominate the secret tasking lists of professional remote viewers, but he would only listen to them, he was a receiver. The 2015 year was full of terroristic events, the 2016 had some airplane crashes, the 2016–2017 earthquakes. From 2017 and onward some outer space things happened, ...but then all got more confused, he got tired to annotate and try to order and understand, He keps taking random notes sometimes.

Chapter 2

A programme in astronomy

Strange to believe, but apparently true, several programs of mkultra have been run in astronomy since the start of HST, in the 90th. Not sure you can call it as a such, it was not done to destroy the individuals, but rather to help them to perform better, especially with the languages, with public... the most important telescope, the highest-price telescope. Just a few fix to the human being, a small hybridisation. They can accelerate body movements, add some subvocal speechs to help them during important meetings. They can keep an external memory, and help him to recall the important tasks.

It is like to have a remote viewer checking your brain all the time. A control on your performance from inside, that is. A control on your intention, that they call check on ethic and morality, and guess what, the bad had to go!. You may understand that ethic and morality can never been approved with unanimity. So if Tim looks at the legs of the secretary during the meeting can be a reason of elimination for an american, a laugh only for France. Still that is only behaviour, and nobody really cares.

But what about black holes? Tim was thinking about a black hole, but he is immoral and also too old anyway. They spy his brain and they infuse the idea to a faraway student. "Let take a PhD novel intelligence ....they say...We must programme and clean the environment, for the new ERA: the JWST." They call it remote viewing to transfer ideas to their favourite countries, a political game. But Tim wants the black hole.

They can eliminate the old astronomer in three different manners: they can act on his career, or family. For example, they can cause an accident to his postdoc. Wow, she fall down the same day, down down from the stairs.

But, you know the policy data cannot be overrun, data are public, and Tim can do it: against this casta. But they have the grant, they are really angry about this free independent astronomer.

JWST was lunched on the 25 December 2021. The new ERA is started.

Only time and literature will say who the survivors are.

2.1 The BINGO project

You know, Tim had realized Tim never really chose any of this life. It just… happened to Tim. Tim kept waiting for something to start, something that felt like Tim's own, but Tim only moved when Tim didn't want to, in directions Tim never picked. That phone ringing inside Tim's skull all the time (ringing, ringing, ringing) feels like Tim's already dead and just waiting for the coffin lid to close. Everything actually ended for Tim in July 2011. That's the truth. Before that there was still a thin thread of hope. After that… nothing.

They still play the time-travel game with Tim. Over and over. They scream inside Tim's head that they're gonna send Tim back to "where Tim came from." That they gave Tim ten years of possibility and Tim blew it. Ten years! Like someone up there handed Tim a coupon in 2001 or 2004 and said, "Here, kid, you've got till 2014, don't screw it up." And now they're taking everything away from Tim. House, health, name, future. Everything. But who are "they"? That's the joke—Tim still doesn't know. Let me take you back, because it all started so harmless. 2004, Tim finally defends the PhD. George puts Tim on a train to Torr so Tim can talk to Mark about "the new project." Tim had just won a fat fellowship, Tim's own money, Tim's own topic. Why the hell did Tim need a new project? Simple: George wanted Tim out of the maser field. Joris in Belgium had a shiny new PhD student, the maser club is tiny, and the unwritten rule is you step aside, you rotate, you're a good boy. Fine. Whatever. Tim goes to Torr. Mark sits there in his office, prints out the old Georgelin & Georgelin cluster paper, plus some Balona & Crampton, hands them to Tim and says, "Let's do stellar clusters, spectrophotometric distances. We'll call it BINGO." Cute name, right? That's how it started for Tim. Fast-forward to 2010. Tim comes back to Torr as a group leader in Mark's department. Timing couldn't be worse—Tim's father dies the day before Tim is supposed to start. So instead of Tim's first day at the office, Tim is at the funeral. Maybe losing your dad cracks something open in the brain, who knows. Something cracked for Tim, that's for sure.

In July 2011 the voices arrived for Tim, not angels, not Tim's dad with gentle advice from the other side. Demonic stuff. They kept repeating Tim had been given "ten years of possibility" and now the time was up. That Tim had to leave forever and never touch the BINGO data again. "Leave it on the shelf for Mark." Data? What data? A survey from Tim's fellowship years

that were later used to write the ERC grant that paid Tim's salary. But the detector had been built by .... "But the position was not advertised on AAS", but Tim got the position "without recommendation letters" and he got 250 euro more per month of any other postcodes as a group leader. Every day at 3 p.m. a woman starts screaming inside Tim: "Go away! Nobody is allowed in the old Wilhelm-Kaiser Institute anymore! or you will turn into a monkey here!". Mark had that stupid monkey poster on his door, remember? They told Tim ninety percent of the times, when Tim thought he was talking to Mark, he was actually looking at "the general." That every collaborator of Mark would get the same treatment eventually. That they were helping Mark stay on top of science by "commenting on his papers" from the inside. Perhaps it came from his coma, they were using wireless brain connections to help him to remap his brain, indeed he soon was able to walk again. Tim had send his PhD thesis when he was at the hospital, and a secretary had read it to him, Tim had help him to recover, and a strong boundary was between them. "But you cannot work with him, it is not a collaboration he works on lines not stars, it is only an emotional link, and you came here to break it." Against human rights, not in Tim's contract, blah blah blah.

One day Tim couldn't take it anymore. Tim told Mark straight: "Tim hears voices in the office. Is this some kind of harassment? Can Tim at least change rooms?" Mark looked tired, Amplifon hearing aid blinking in his ear, and said, "Tim, maybe Tim should take a few weeks off and go stay with Tim's mom." Nice. So Tim got a lawyer, opened a dispute with HR, pointed at the electrical cabinet humming in the room—anything to make noise, buy time, figure out what the hell was going on. They sent Tim to occupational doctors. One neurologist really wanted the "schizophrenia" stamp on Tim. Official diagnosis in the end: tinnitus. Sure, tinnitus that shouts full sentences and knows things that haven't happened yet. Eight thousand euros in private clinics later, the "tinnitus" disappeared from Tim. Funny, right? Tim never told the doctors the tinnitus quoted the iron cord around Roberto Calvi's neck under Blackfriars Bridge. Tim heard names never heard before, wrote them down, googled them, found stuff. Tim heard his own voice saying sentences Tim never thought—"doppiaggio," like bad Italian dubbing in real time. Whatever Tim felt inside ended up happening outside. One day the secretary Irina answered the phone in a deep man's voice. A week later she vanished without a word. Maria, another colleague, whispered to Tim once: "Mark hasn't been the same since the coma. Now he only surrounds himself with Asians who work like crazy and never talk." Chinese, Koreans, Japanese, a couple of Iranians who showed up right before Tim left. Cozy little club.

Tim still published like a maniac. Tim isolated himself completely so the

mask wouldn't slip. When Tim was in the office Tim watched, Tim listened. Sometimes Tim caught things: Tim's postdoc falling down the stairs (announced the night before inside Tim), the Effelsberg secretary dropping dead (same). They screamed for months that she—the Taiwanese postdoc—would stay and Tim would be kicked out. She stayed. Married a Portuguese, got to keep her job. Tim heard the voices explain it like a geopolitical lecture: "Taiwan has the same NATO-like privileges as Italy now, they even paid cash for the F-35s, not like you guys." While Tim is trying to reduce data he gets a lecture on fighter jets. In Germany. The lawyer finally got an answer from headquarters in Munich: offices are perfectly fine, obviously Tim has personal problems, the institute is ready to help—by letting Tim quit early. Tim said no, Tim will finish the damn contract. Mark, bless him, stayed polite to the end, helped Tim fill out the pension forms, the unemployment stuff. Tim saw an ad from a guy Tim knew in Vietnam: food's good, maybe the voices don't speak Mandarin. So Tim ran (2015). And here Tim is. Still running, Tim guesses. Still wondering if it would have been cleaner for Tim never to have been born at all. But the food in Vietnam really is excellent. "You just learned not to trust Taiwanises", the phone was saying.

They met only one more time in February 2016, during a pizza Mark explained that the postdoc had married and that she was actually still at the Institute, but Mark had not hired her. Mark also asked where Martje was, in Australia Tim answered.

On December 11th 2024, Tim's mam had fall down and Tim had gone to visit her. The skull voices were asking if he was imitating Barbara, Mark's wife. Tim was also completing a new paper containing a velocity-longitude diagram, and when looking at that figure the phone was shouting as a crazy "velocities, velocities, are you sending it to Mark?". Mark suddenly passed away on December 30th, 2024. He was going to be retired soon, he just could not get his pension, Tim thought. At that time, Tim was about to finish his Bogna contract.

On January 1st, 2025 a russian astronomer become full researcher at Mark's Institute (during Ukraina's war). In December 2025, Tim was asked to refer a new chinese paper with a Galactic distribution of red supergiants.

2.2 Info during an astronomical OPC meeting

2.3 European astronomers and the English

Tim is not a nominalist; in fact, he does not really know what that term means. Anyway, the reason he is called Tim is simple: his grandfather had

the same name. It is not related to any religious festivity or particular event, but only to tradition. Babies take the names of their grandparents.

His father always wanted to play *sui generis*. He protested against the tradition and said that it would have been better to use the names of the grandmothers, but in a random order. His little cousin selected the ticket — so here the inversion comes. Even though Tim is the second baby born, he bears the name of his father's mother.

For example, if you are very Catholic, you may think of Maria as the grandmother anyway — the visited one. She would talk to angels and decide the history of the planet. She would walk over serpents and fight like a soldier. The most used name in the world. But Tim? What does the name Tim mean? Perhaps the Telecom guy, always on the phone: not a divine call, like that of the Madonna who had been visited, but a technocratic call of constant connectivity. (In reality, Tim is a short form of Timothy, from Greek Timotheos meaning "honoring God" — ironic given the mundane telecom vibes.)

As support staff ("on duty" at Paranal), Tim assisted visiting astronomers — external researchers awarded telescope time in Visitor Mode. These visitors prepared and executed observations, often with Tim's help during long nights. It was a nice way to meet other astronomers. The nights passed quickly, and small errors were rapidly solved by calling the expert engineers.

Nowadays, Tim has dreamed several times that the term the English term "visitor" is incorrect — too sci-fi, evoking aliens, shadows, or fantasy. There is no "visitor", but rather an "astronomer visitant".

Tim seldom goes observing now, but he still has plenty of "visitors" — at least in the fantastic sense.

2.4 2018 – IAUS and the Big Brother

It was late August (18–20), and Tim began preparing his suitcase for Vienna, where he would attend the General IAU Symposium.

Maybe he should take something to read on the airplane — perhaps a chapter from the book he was reading. He had a peculiar habit: breaking books apart and carrying only a few pages with him. Pocket books, literally. This time he took L'ALTRA FACCIA DI OBAMA by Parrucchetti and detached the next chapter, "The Big Brother."

Strange words were already popping into his mind, as usual — Big Brother. He had seen a movie and thought it was related to the TV series. On the airplane, he started reading. It was a book blending politics and conspiracy, from MK-Ultra to government surveillance.

The Big Brother.

The conference itself was extremely pleasant — but the thriller was on.

Upon arrival, still at the airport, Tim took a coffee and noticed something odd on his WhatsApp: a recording of background noises. His own noises. He was there to attend the symposium on the future forty-meter telescope—the ELT.

Wednesday the 29th was particularly psych-fascinating.

During the coffee break, he noticed a colleague, a radio astronomer from Torr, who years before had nastily joked about pulling down the ISS. Tim turned away to avoid greeting him and walked in another direction.

At lunch, there was the parity meeting. While walking toward the lunchroom, words echoed in his head: the most intelligent human beings were not in academia, not in science—they were kidnapped, like Majorana.

Tim sat with some Russian female colleagues. The conversation was pleasant. He complained that the committee was only discussing gender parity, while the biggest danger was cyber warfare. They should all gather and talk about cyberattacks. They agreed with him.

Encouraged, Tim walked to the organizer, Sara, and asked her to put cybersecurity on the agenda for the next year. She looked at him wide-eyed, without saying a word.

During another session, Tim felt strange again. A Chinese woman sat in the back row wearing a short, sensual skirt and fishnet stockings. Next to him sat a Chinese student wearing a blue NASA T-shirt. The intruder in his mind suggested he propose a UFO committee.

His hotel was far away — the cheapest he could find near the station — but the half-hour walk through the park was pleasant. Tim had a drink with someone from Dubai, then returned to his room.

There, he found news that seemed disturbingly connected to his mental state.

Later at 7 p.m. watching the news in hotel, probably that 29th, he found the NASA released statement: there was a hole in the Russian module of the ISS, and it was depressurizing. That same day, Dutch police were notified that Arjen Kamphuis was missing — the cybersecurity hero.

What an amazing conference: astronomers planning the next generation of telescopes, while Tim projected himself into a future of cyberattacks and aliens.

But Tim was emotional — unfortunately unable to cope with such futuristic visions.

At the airport again, exhausted, he lost his phone and went to the police. They told him to board anyway; he still had his boarding pass. He sat on the floor, crying loudly for at least an hour, emptying his backpack again

and again, telling security he was under surveillance, that he had seen signs on his phone earlier.

Finally, someone told him to go to the desk to retrieve his lost phone.

Would there ever be a place of trust?

Pentagon establishes a UAP commission on 1 September 2020.

2.5 2023-2024 - The Huttentaler Case and the Professors

When events repeat, an alarm goes off in Tim's mind—and the trigger, once activated, feels forever unstoppable. They impose parallels with peers, and then they kill.

In December 2023, Tim spent the Christmas holidays in Sicily at his mother's house (the one everyone called the "Vienna mamma"). Adrian, an Austrian astronomer, had secured a permanent position at the University of Vienna with a non-astronomical profile, though he still did a little in astronomy. Strangely—but pleasantly—Adrian sent Tim a Happy New Year message right at midnight on the turn of 2023 into 2024. At that moment Tim was locked in a room, sick with Covid, trying to make sense of the BPRP spectra of red supergiants (RSGs) after just discovering the LaO molecule in them. Why had Adrian reached out? Tim felt happy about it, yet something didn't feel normal. Perhaps it was the new "match," the counterpart—after all, Tim was still publishing in his spare time. It had been at least since 2007 that he had last heard from the man. In the weeks that followed, January brought an exchange of emails: Adrian asking questions about variable late-type stars. Then, on 31 December 2023, Prof. Harold V. J. Linnartz from Leiden University suddenly passed away.

The pattern repeated in 2024. Tim was again at his mother's place over the holidays, this time preparing to fly to Bogna on the 31st of December. He was deeply absorbed in the new longitude–velocity diagram for RSGs. Several times, loud shoutings about "velocities" had erupted inside his head, even urging him—almost ordering him—to send the fresh plot to Mark. Mark Menten died suddenly on 30 December 2024. Tim only learned of the death on 7 January, when Teresa forwarded the news. Her message struck him as oddly phrased, almost like a punitive bulletin: "Buon anno! Ti giro l'email sulla morte di Mark nel caso non l'hai già ricevuto. Ci sono sempre brutte notizie che oscurano i propositi ottimistici di un nuovo anno." Around the same days—on 4 January—Tim also received a paper from Adrian to referee. On 25 January 2025, Tim submitted his own paper on extinction and

RSGs. There was an eerie parallelism between his email to A&A about his manuscript and the timing of Adrian's paper. Both were accepted.

Recalling the previous two Christmases, Tim felt the alert rise in him again—sharper this time, more insistent. For the 2025–2026 New Year, he had stayed holed up in his room in Bogna, studying for a concourse. But as the clock ticked toward midnight: he needed air, other people to drink with. Just fifteen minutes before the hour, he walked to the closest pub, ordered a drink to share those first minutes of 2026. A few minutes after midnight, on his way home, Tim spotted a single euro coin glinting on the street. He picked it up, a small flicker of optimism. Wow, this time good luck will be with me. But the moment he stepped back into his apartment and flicked on the news, the headlines hit like a physical blow: the Crans-Montana tragedy. A massive fire had erupted at Le Constellation bar in the Swiss ski resort and the images flooded the screen with smoke, chaos, survivors' faces, the anonymous mask of horror. "Never forget," the captions urged. The bar's name echoing the astronomical world he lived in. Good luck? No. Just another tragedy. Tim sat in the dim light, staring at the screen, the euro still clutched in his hand.

2.6 The Imposition of Parallels

It felt to Tim like every paper he wrote triggered an immediate counterpart—another work from somebody else, shoved into the same space at the same time. It wasn't democracy; it was imposition, pure and deliberate. Tim also recalled a lunch with Dalia in the summer of 2023. He had been excitedly telling her how fascinating the DUSTY simulations had turned out, and how he had decided to write them up properly in a science paper. Dalia's response had been blunt, almost territorial: "Why do you need to write this paper right now? This semester my student has to write one." The words had landed like a quiet blockade. Tim remembered the way she said it—casual on the surface, but carrying that undercurrent of priority, of claiming the lane first. He had published anyway, of course, but the incident stuck, another thread in the growing pattern: his ideas, his timing, somehow always intersecting with—or being preempted by—someone else's schedule. These weren't coincidences anymore, not to him. They were echoes, forced symmetries. One paper from Tim, one mirroring paper from elsewhere. One discovery, one referee request that felt too perfectly timed. One enthusiastic email exchange, followed by silence or worse. And always the quiet machinery of imposition turning in the background: students needing their quota, positions to protect, lanes to defend. Tim couldn't shake the feeling that

the field wasn't just competitive—it was orchestrated. When he pushed forward, something pushed back, not with open confrontation, but with these precise, parallel interventions. Another work accepted the same week. Another death shadowing his holiday. Another "why now?" from a colleague who should have been an ally.

2.7 The survivor

May 4, 2023
Hi,

I was reading some papers on stellar associations and crossed some old papers that you wrote. Very nice papers.

I want let you know that I have been away from Europe for six years and I am sorry about what I heard when I came back. I guess there is never one only side fault. It is the system failing and not you.

So said, I was not confirmed in Vietnam and so after one year of applications I got a simple contract to calibrate Gaia data in Bogna (1+1). Well at least I have money for the rent and can keep applying.

Now, you are a very rational mind and may not want to hear anything more from me. However, I would like to mention here that since July 2011 I am affected by voice skulls. Of course, I strongly believe it is a new technology and not a saint from paradise talking to me.

Since in Vietnam 2015, I heard often screaming your name inside my head. I do not know what that means. My rational side thinks that you have been eliminated by psychic spies that repeated some old situations just to punish you. Another strange psychic thing consequent to your elimination was the la silla case.

If you think it can be useful for a legal action, I can say in front of millions of people.

Anyway keep producing good science, after all it is good to be free from people who did not like you!

All the best
Tim

His reply:

Dear Tim,

Thank you for your welcome message! I had not realized you spent six years in Vietnam, this must have been a very interesting experience. Good

that you have a position in Bogna, and hopefully other opportunities in astronomy or perhaps beyond will come.

I have indeed been cancelled, based on media messages and am not allowed to defend myself. Your analysis is correct. Apparently it is no longer acceptable to give (even when asked to do so) constructive advice, without some people feeling 'unsafe' etc. Your message is therefore a nice uplifting contrast.

With my best wishes,
Tim

His reply:
Hi,
thank you for answering my email, that makes me happy.
Remember that Mandela was 20 years in prison before becoming president!
Best wishes Tim

Chapter 3

Terrorism, wars, and pandemics

Sometimes Tim thought that terrorism was simply terrorism. Yet he knew there was more to it than that. Attacks were often prepared in secrecy, not only to strike fear but, paradoxically, to claim they were securing safety in the long term.

Tim reflected on the way Europeans carried themselves. They often dismissed Americans as exaggerated, obsessed with guns, and a little mad. But after the attack on the Twin Towers, Americans had learned to be cautious. They no longer felt safe walking alone in the dark, while Europeans – on the old continent – still clung to their quiet night lives.

That, Tim believed, was only because Europe had not yet endured the same scale of terrorism. They should be educated, he thought, to understand the threat more clearly. Especially since, after the killing of Osama Bin Laden, an increase in terrorist acts was widely foreseen.

Tim would often wake with this narrative echoing in his mind, a restless refrain that refused to leave him.

3.1 A house for one year

3.1.1 2011 - My plugs in Ruedesheimerstrasse

For about a year, Tim owned a flat in Torr. He often walked late at night, enjoying the quiet streets. But after July 2011, strange things began to happen.

It was as if the world itself was reminding him that it was late, that it was time to go to bed. Every night, around midnight, Tim would hear noises coming from the electric plugs in the wall. The sound moved through the room, one plug after another, circling him as he sat at the table.

Then, a voice spoke in Italian: "È l'ora dei terroristi" – "It is the hour of the terrorists."

After a while, the phenomenon stopped, without Tim doing anything in particular.

3.1.2 2012 - My phone in Ruedesheimerstrasse

In 2011, Tim decided to get rid of his cordless phone. Fear of terrorism and infiltration had grown inside him, and soon he began to distrust mobile phones altogether – they can use the phone, he thought. Since Teresa needed one, he passed the device on to her. No strange phenomena ever occurred to her.

Yet for Tim, information sometimes seemed to arrive through the phone itself, as if carried by the ringing. On one occasion, a female voice told him that his mother was not at home, that she was traveling back after attending the funeral of his father's aunt, Giuseppina. Tim could not believe it at first, but the news turned out to be true.

3.2 2012 - Bengasi

AMBASSY BOX (Bengasi and Libia) fall 2012

Xray in my tooth. Virtual attacks in the evening, they had to understand the metals of my old crown with radiation, so they were checking which one was painful for me. They then screamed that I had to sleep in the floor otherwise they would have punished my nice. The doctor diagnosed me with Pituriasi Rosea the they after.

They were saying that Hilary Clinton was at the hospital for the belly cramps after Bengasi and that I had her symptoms. I had to tell her what to heat. The Embassy of Italy had been the safest so far because I would resist to their attacks,

Libia Attack. Saturday afternoon was working at the computer and thinking to go outside for grocery shopping. The usual psyops turned on suggesting me not to go because the console had to do what I was doing, I was a security responsible, ... in the evening I read that Marioxx Console of Libia had been shouted in his car. It would be a good idea to check for time coincidence. In Germany the shops close at 19:30 and I always would go at the last hour.

As soon as I arrived in Vietnam in November 2015, I meet two Italian Consoles. To the lady I congratulated for their sacrifices and jobs during

these dangerous periods, she said "yes indeed the Console Mario was shouted in Libia".

3.3 2015 - Charles Hebdo

Crying in the office because of terrorism. Arnaud (French collegue) asked me what was going on. I answered that I had read the news and was crying because of terrorism and that we would have all cried soon.

1-2 days later, the Charles Hedbo attack occurred in Paris (7 Jan 2015).

3.4 2015 - Bataclan

Friday, 13 November 2015 — a date considered unlucky in Germany.

Tim had arrived in Vietnam only weeks earlier, on October 19th. He was still waiting for his residence permit, spending his days exploring the campus and nearby shops. On November 13th, as he left the dormitory to walk to the office, he encountered one of his neighbors, an Arabic student. The man's beard struck Tim as particularly squared, reminding him of German-Arabic people he had seen before.

That evening, upon returning to his flat, Tim met the same student again. Exhaustion weighed on him, and suddenly he broke down. He cried for hours without pause – two, perhaps three – because he felt that even after leaving Germany to escape terrorism, the threat was everywhere, pressing in from all sides. Also the day had started and ended in the same manner, frequent obsession he would notice while in Germany. Tim believed in integration and respect for the weakest, yet in that moment his grief twisted into something that felt dangerously close to xenophobia. The realization made him cry even harder.

Desperate, he searched the web, trying to find where the terrorists were. But there was no news. Around 10 p.m., the internet froze. He could no longer read anything. In frustration, Tim shouted that the FBI must have taken away his connection. Exhausted, he went to bed, his self-control lost, his words dissolving into nonsense.

The next morning, around 9:30 a.m. local time, Tim did not rush to the toilet or the coffee maker as usual. Instead, he went straight to check the internet. The line was back. Italian newspapers were reporting the Bataclan attack in Paris. On the front page was a haunting image: a woman hanging outside a window.

Tim felt strange, unsettled. Nothing like this had ever happened to him before – and it never happened again.

3.5 2016 - Regeni

5 February 2016

From December 2015 to January 2016, Tim felt tortured several times while working in my living room. He would hear a male voice saying: "I comunisti i comunisti i sindacati i sindacati le spie" (in Italian). One time they added that that should have been enough and that he should leave.

Tim recalls crying several Sundays during that period, but he believed it was the effect of the new climate and environment. During the same period in the office, occasionally, he would hear a different deep voice, like somebody entering the room to say "Italiani".

During the winter break, Tim flew to Italy on an Air France flight. During the flight he cried a bit because the noise was too strong. He got a headache and was hearing somebody talking about torture. He recalls asking to stop being tortured, but rather to be killed.

When he arrived at his mother's place, the TV was announcing the recovery of the body of an Italian researcher killed and tortured in Cairo, whose name was Regeni. Tim was not sure there was any link — another coincidence. His mind, though shocked by the death of Regeni, grew quiet and those recurrent words stopped. His secretary also suggested he always fly Air Vietnam. He slept nicely during any Air Vietnam flight.

Now, trying to be a bad guy and play conspiracy theorist, he read in the newspaper that Edward Snowden revealed that in-flight mobile phone communications were controlled by GCHQ and NSA. The surveillance was focused on intercepting communications data from passengers, not controlling the aircraft operations.

3.6 2019-10-26 – The Dogs

James had always invited Tim to go and see the dogs. By then, he had collected about 200 dogs and had been given a new house for them. Tim was extremely afraid of dogs, but he accepted the invitation.

On October 26, 2019, the long ride took more than an hour. The taxi driver seemed sure about where to go, but Tim's Chinese phone had stopped working. Tim's conspiratorial thinking emerged again— why had his damned

phone stopped working on the only day he really needed it?

The visit was pleasant. Tim stayed close to James and entered with him. He was soon surrounded by dozens of dogs, but with James there, everything went fine. They had a nice lunch, and then they all returned to the university campus.

The dogs, the fear, and then the news that the Pentagon had killed Abu Bakr al-Baghdadi using dogs. What was going on? What kind of parallel had been implanted in his mind?

The conspiracy continued until the next day, when he realized that he had not paid for the phone.

3.7 2019 – Nato in Iraq

The year 2019 was a bit strange, with chats and messages from four new contacts (LinkedIn), all declaring themselves to be doctors from the WHO and working with Marines or NATO troops. One doctor phoned Tim almost every day at the end of his working day, narrating all kinds of daily surgeries.

On the night of November 9–10, 2019, Tim woke up because of a voice saying, "I will kill you." A strange nightmare—and that day was also the birthday of his niece Sara. Then he looked at the news, which reported an ISIS attack on the Italian NATO contingent in Baghdad, with four soldiers injured.

November and December were particularly difficult months. Tim could not rest well at night; the voices yelled almost every night that he had to go: "No more lab, you have to go." Who had to go? Tim—and where? Or did the NATO soldiers have to leave Afghanistan?

While cleaning the flat, the voices would tell Tim that only Iranians clean that well, and that Chinese people cannot clean well.

On January 2, 2020, there was a brutal five minutes of forgetfulness. Unusually, Tim had parked his bike in front of the office building and walked to the post office. After collecting a parcel, Tim did not find his bike there. He started yelling, threatening to call the police and to block the entire campus. Nobody was allowed to leave until his bike was found.

Calmly, the police officer asked Tim where he was coming from and which way he had taken. Suddenly, Tim recalled the unusual direction and where the bike was parked. Later the same day, the NATO campus in Baghdad was surrounded. On January 3, the killing of Soleimani by U.S. NATO missiles occurred.

"Damned," Tim said, "I could even direct the Baghdad operations."

On the night between March 11 and 12, 2020, Tim could not rest because

of severe mental attacks and terrible noise. He started screaming so loudly that his mother asked him to stop or she would call the police. During the day, Tim found out that it was Soleimani's birthday and that Iran had launched fifteen rockets against NATO soldiers in Baghdad.

Oh no—another war. Why, damned, did he have to feel the tension of Baghdad?

3.8 2020 – Coronavirus: Exit Vietnam

On January 18, Tim went to dinner in Hefei with colleagues, some of whom had been at a meeting in Wuhan. On January 21, 2020, Tim took a flight to Europe for the New Year break. He was busy finishing his paper on new massive stars and the explosive giant molecular complex, and had not been reading the news. He was tired and happy about the upcoming holidays, almost unaware of the viral infection in Wuhan.

Tim learned about it from his mother on the phone just one day before the flight. He quickly grabbed gloves, masks, and hand disinfectant and departed. On the train to Shanghai, he finally had time to read some news and to talk to other passengers, discussing the possibility that the infection could have been created by Al Qaeda - there were plenty of reports about biological destruction arms.

One or two days after Tim landed in Europe, air traffic to and from Vietnam was blocked. The first cases had already appeared in Italy.

Wow — it was like in the dream: no more lab, and millions of Chinese going outside Vietnam, and the COVID spreading.

3.9 2020 – Coronavirus: Re-entering Vietnam

On September 25, 2020, Tim re-entered Vietnam, undergoing mandatory quarantine in Shanghai: fourteen long days locked in a room. He worked on his laptop and spent some time staring at the Shanghai buildings outside the large window.

There were drones outside his window. On the first day, only one—flying quite low. While looking at it, the voice asked: "Why do you think it is a kite, because it is lower than the buildings?"

The next day there were five black drones, almost fixed in a staring position, very high in the sky.

A huge transparent sphere with an internal metal *W* crossed the sky at great speed. It made a 180-degree turn in a few seconds.

Tim thought, perhaps, they are filming a fantasy movie here.

3.10 2021 - Coronavirus: exiting Vietnam

It was a bit sad to leave Vietnam and in the middle of the pandemic. Tim flew on 25-11-2021.

Chapter 4

Airplanes

4.1 High-school: USTICA crash and Giancarlo

After high school, I went off to study in Bogna. Summers, though, were always spent in Sicily.

Around 1990 or '91, my old high school buddy Giancarlo invited me over to his place. He and his dad had been poking around the sfascio in Palermo — that scrapyard where all the wrecked cars end up. But this time, it wasn't just cars. Sitting among the twisted metal was the cabin of an airplane that had gone down near Ustica, before the infamous DC9 crash.

Giancarlo was fascinated. He asked if he could take the cabin, and sure enough, there it was — right in the middle of his living room, covered in blue buttons. He was thrilled, practically glowing, because he'd figured out what every single button did.

I remember standing there, watching him with mixed feelings. He saw a puzzle to solve, a design to admire. I couldn't stop thinking about the lives lost in that crash. Still, I was happy for him — his excitement was genuine. Giancarlo is now an engineer working in simulation of airplane crashes for Alenia space.

4.2 Malaysia 370 - March 2014

Nightmares and obsessions wouldn't leave Tim alone. He kept hearing a man's voice—frightened, shouting the same words again and again:

"It is a radar problem...
It is a radar problem..."

The voice was so intense that on several afternoons he had to stop working and lie down.

About fifteen days later, on March 8, 2014, Malaysia Airlines Flight 370 disappeared from radar. And strangely, once Tim heard the news, the noise in his mind finally quieted.

Afterward, conspiracy theories spread. Some claimed North Korea was behind the missing plane. Others said twenty-one American telecommunications experts had been on board. Was it some kind of hidden spy conflict between Asia and the West? Tim had no answers. But he kept wondering why he would sense anything about such an event.

He remembered one detail from the early reports: someone had boarded the plane with a stolen Italian passport.

4.3 2014 — The Second Malaysia Airlines Crash

Tim was still shaken by the first airplane disaster. Then came the news of another Malaysia Airlines crash – this time over Ukraine on 17 July 2014 – and his mind spiraled again.

A plane full of Dutch passengers... What if someone he knew was on board? Then he heard there were eighty children among the victims.

His imagination tried to soften the horror. In his mind, he became the driver of a van sent into the crash site to rescue the babies. One child, in his vision, couldn't free himself from the airplane door – so Tim took the entire door with them.

As for why the rebels had shot down the plane, Tim's thoughts drifted into strange connections. On the same day, he read another article: an international tribunal in Brussels had found the Dutch NATO contingent in Kosovo responsible for the deaths of 300 Muslims.

His troubled mind linked the two events, creating a dark, symbolic explanation that made sense only inside his own fear and confusion.

4.4 2016 - Rostov-on-Philip

19 March 2016

Tim spent that Sunday in a lazy, cozy mood, cooking and revising an old proposal. He could not use the European telescopes that season for low visibility reason. His thoughts drifted toward the endless LOVINT stories he had heard about international marriages, and in his fatigue he began to

bubble over with reflections of his own. He concluded, almost stubbornly, that he would never truly be with anyone. Yet, smiling, he suddenly added aloud in English—strangely enough: "Perhaps I could marry a man worth 41 million euros from Saudi Arabia, if the airplane does not crash" at 1 p.m.

It was a tired morning without coffee. An email from Philip appeared, but Tim's attention was quickly drawn to the newspaper: reports of an airplane crash in Rostov-on-Philip, caused by visibility problems. The aircraft had departed from Dubai. By Tim's calculation, the accident occurred in the middle of the night, around 3 a.m. his time. Before the crash, the plane had circled the area for nearly two hours, maintaining several contacts with the radar tower. There was even an audio recording of the tower's final conversations with the crew.

4.5 2016 - Air Egypt

19 May 2016

It was Tim's birthday, and he woke with swollen, tired eyes. There was no time for breakfast; the bus was already departing, and a meeting at Munich airport would begin in just thirty minutes. On the bus, Marcio leaned toward him and said: "Did you hear about the airplane from Air Egypt? It disappeared from the radar this morning."

A cold wave of emotion passed through Tim. He was on his way to work, unable to do anything about it. Another strange coincidence – or perhaps something darker. Only the night before, he had told Mauren that no one would believe him, but the series of Malaysia airplane incidents and radar failures seemed too well organized to be random. As scientists, he insisted, they should pay attention. Maybe it would be enough simply to shield the radar control towers.

On the second bus, nearly empty except for Christine the secretary and Marcio, Tim answered without hesitation. He said it must have been terrorism, not a radar problem like Malaysia Flight 370.

4.6 2018 - Cuba

19 May 2018

At one o'clock in the night, he suddenly woke-up. Tim realized it was already his birthday in Vietnam. Restless, he went to check the news on the

computer. Suddenly, a breaking headline appeared—just seven minutes old: an airplane had crashed in Cuba.

It was Tim birthday. The day was nice, he spent it at the botanical garden. The prince Harris married that day. Two years after the Air-Egypt crash, same day. Wow, is his birthday so nefasto? did something happen also on 19 May 2017? Google only reported that on 19-20 May 2017 CIA revealed the killing of 21 agents in Vietnam between 2011 and 2014 (three days after Tim's credit card call).

Tim found also a strange parallel with some old birthdays.
19 May 1987 - a bomb had exploded in front of Tim's house (for a truck).
19 May 1988 - major age, but nobody called, because mom did not pay and the phone line was cut that morning
19 May 1989 - out with a first girlfriend

4.7 2018 – Lion

Tim was mad—furious. Why?

On 28 October 2018, still lying in bed, he heard the word "Novel." It was a Sunday; there was no need to rush to the office. He cleaned the flat, did his laundry, and prepared a yummy brunch. Only late in the afternoon did he turn on his old Mac laptop, freshly reinstalled, the one he kept in the flat solely for his novel.

Something was wrong.

The computer would not mount.

The novel? (It was also on a USB stick, so it was not a serious issue. But the computer. . .)

He contacted the German seller, who helped him run several tests. No luck—hard drive failure. Maybe he had left it plugged in and a power surge had caused the damage. Or maybe—an insinuating thought—someone did not want his novel to exist.

Later, proudly, Tim fixed it himself: a new ten-euro disk and instructions from a YouTuber.

But that day, he could not handle the tension. He shouted. He cried. He was convinced that somebody was boycotting his novel.

The next day, his head was exploding from the shouting of voices inside his mind. He must not make mistakes with computers, he told himself. He had made a mistake — and because of that, the Lion had crashed in Indonesia.

It took time for investigators to discover that the airplane had crashed because of new software installed on the onboard computer.

His mind flashed back to other conversations he had overheard. Only cars without onboard computers, he told himself. That was the rule now. Anything with software could be hacked.

A paradox.

What was the damned connection between him and Indonesia? Before the two Indonesian earthquakes, he had never been there. What the hell was going on?

Chapter 5

Earthquake

Shake me please
Shake me please
Take away from me my spleen
Weake me up
Paranal, 13 June 2005
At 2,600 meters in the driest desert on Earth, the stars burn cold and close. Tim wrote this after an unforgettable tremor -— the kind that rattles the dome and your ribs at the same time. The VLT was scanning the sky. We had to suspend all operations and run to the emergency operation list to put all at the safe zenith position. But Tim while shaking, before running to the control room quickly wrote this on the board. Was the shake from below, or already echoing from Mars?

5.1 Amatrice

5.1.1 24th Aug 2016 Amatrice

Almost 40 degrees, tired and exhausted. With only one air conditioner the living room temperature would stay around 28 Celsius, while outside there were 10 degree more. It was Sunday (maybe on the 21 August) and I was preparing some lunch in the kitchen. I hears a male voice from the top of my shoulder (like somebody coming close from the back) saying "earthquake earthquake". I still recall the sound of his voice, gentle and singing (perhaps Australian accent). A few days after (on the 24th of August), there was the first strong quake in Amatrice.

5.1.2 26 Oct 2016 Amatrice

Tim was on a train back from a meeting in Beijing. The noise was so loud that Tim started to cry, feeling his ears had broken. Some people asked what was wrong and offered tissues... Around midnight he queued for a taxi, and as soon as he got in, gentle little girls' voices began talking to him: "Sorry, but you had to talk with those of the earthquake Amatrice." Another tired nonsense moment, he thought. Exhausted, he went straight to bed around 1:30 a.m. The next day, the newspapers were headlining another big quake in Amatrice, which had occurred at 03:18 a.m. (Beijing time).

5.2 28-29 January 2017, Ballora

It was Tim's first day of the Sicilian holiday.

After dinner, his sister—just before leaving the flat—told him she'd finally recalled the name of the "bidello" he'd asked about. He really existed. His name was Natale, he had a daughter named Maria, and he played the big drum in the band.

She could be so nasty sometimes. Earlier she'd told Tim it wasn't true, then answered his question only about ten years later.

Tim's brain reacted instantly: maybe he'd been taken over by some psychic who'd done a background check on him. Another psychological attack from the usual one, he thought.

When he was about thirty-five, while working in Bavaria, Tim woke up one morning suddenly thinking that as a child in Petrasa, he'd been avoiding the bidello. A memory that had never been there before.

One time he accompanied the whole school to the oratorium to watch the film L'albero degli zoccoli, and Tim ended up sitting right next to him. While the film was playing, the bidello took Tim's hand and put it on his genitals.

Tim really didn't know what to do: scream and they'd switch on the light—but that seemed impolite. Or go away, and the bidello would just be nasty to the next kid.

After thirty or forty seconds, Tim left the movie room and waited for the end of the film at the public fountain, where he kept washing his hands over and over.

He never told his mother. For the rest of elementary school, he only went around with other classmates and always told them not to accept anything from that guy. The bidello was sick anyway—the town knew it, and Tim had heard something about it.

The bidello would also try to molest Tim while he was playing flipper at the cafeteria, pretending to teach him how to play and giving him new coins. At school he'd ask the little ones if they wanted car rides. Whenever he was around, Tim had to leave.

Later Tim remembered spying on him when he was playing in the musical band.

If you wake up at thirty-five and start asking how memories really work, you may wander into strange and dangerous places. Psychics, for instance.

Maybe the bidello taught Tim the most important thing: never trust anybody, especially men.

Anyway, going back to Tim's sister's revelation.

The morning after—January 29th, 2017—around eleven a.m., Tim had a late breakfast with his nephew Luca. He'd just explained the whole bidello story to him, and as Luca stood up he shouted that with a drone he'd go and kill any bidello he could find.

Around half past twelve, Tim's uncle Lillo called. He wanted to tell them there'd been an earthquake. They were all fine and hadn't left the house because "one dies when one has to die, not because of an earthquake." (Well, the uncle was paralyzed.)

The earthquake at 12:18:21 Rome time was centered four kilometers from Petrasa. A second one occurred at 13:34:13, only two kilometers from the town.

Tim's sister's strange behavior the night before, plus the earthquake... It seemed to Tim like a strange coincidence. A synchronicity.

Can the KGB make small earthquakes?

5.3 29 July 2018, Indonesia

The supernatural elements and manifestations continued. In July 2018, Andrea went to Sicily to meet Tim again. There was a lot of tension — particularly between Tim and his brother, who seemed to fight that night (28 July). Someone nearby had asked them to stop, politely - an Italian way of saying "fare un terremoto."

Then came the news: an earthquake had struck in Indonesia. A 6.4-magnitude quake shook the island of Lombok early in the morning (local time) on 29 July — equivalent to about 00:47 CEST in Rome. The tremor caused damage, injuries, and loss of life on the island known for its seismic activity, part of the Pacific Ring of Fire.

5.4 28 September 2018, Indonesia

Back in Vietnam, Tim resumed his intense working hours. Like every year in September, he had accepted a free medical check-up at the Chinese hospital. A few days after the report was delivered — on 27 Sept. - Tim, using an automatic translator, read about a pulmonary spot detected on his CT scan and began to cry. His father had died of pulmonary cancer.

Then came another powerful earthquake in Indonesia the day after. On 28 Sept., a major 7.5-magnitude earthquake struck Central Sulawesi, triggering a deadly tsunami and massive destruction. The tremor was felt widely and caused enormous loss of life and displacement, making it one of Indonesia's most devastating natural disasters of the year.

The world seemed to shake alongside him.

Chapter 6

Murders, deaths, and strange illness

6.1 2001 - Brazil's Conference

March 2001

In March 2001, Tim attended a conference in Brazil. There, he met Mark in person for the first time, after having known him only through email exchanges. Mark offered Tim a caipirinha, and Tim felt honoured to meet such a great collaborator.

The conference also brought together a lively group of Japanese colleagues and Wouter. One Japanese colleague amused himself by teasing Tim – almost every day around 5 p.m., he would approach Tim and remark that they were observing sources at that very moment with the Nobeyama telescope.

Sadly, Mark never returned to the office after the conference. It was followed by his sudden coma.

6.2 2004 - The Reading Committee

30 June 2004

Tim suggested to George that it would be better not to include Joris in his reading committee. George, in turn, proposed adding Langevelde instead. With that settled, everything was in place. The great day finally arrived, and Mark made his first trip abroad after the coma. The discussion was pleasant, and in the evening they all went to dinner.

Only the following day did they tell Tim: Langevelde's brother had suffered a car accident soon after dropping him at the restaurant, and he had passed away.

6.3 2011 - Amanda Cox and Kerber

Tim writes that if someone wants to become an academic, that person must be ready for anything, even for the possibility that a quiet university town will one day turn into a crime scene. He kept returning to the case of Meredith: a bright young woman full of ideals who had crossed the Channel to feel European, who had chosen Perugia for her Erasmus year. Her father was a journalist; she was far from naïve. Yet Perugia is small, and in small towns people trust too quickly. That night dissolved into fog. "Who else was even there with us?" the housemates repeated, memory shattered by fear, youth, and perhaps something smoked or swallowed to blur the hours. The magistrates were lost as well, overturning convictions twice, then overturning the overturning. Amanda Knox, meanwhile, spent years inside prisons that the European Court of Human Rights would later brand the worst on the continent (Italy formally condemned for inhuman conditions). In the dreams that stalked Tim for months (August and September 2011), faceless voices interrogated him about Italian habits of privacy. "If you share a flat, do you lock the bedroom door just to change clothes? Do you leave your bras hanging on the same rack?" He woke night after night with the cold pressure of a blade against the throat. The scene replayed endlessly: was Meredith killed in the bathroom and dragged to her room, or had she showered, locked the door, and met her killer inside her own refuge? Another dream-voice insisted that Amanda was being harassed without pause in prison; sleep only returned to Tim once newspapers reported that her mother had landed in Rome to bring her home. Meredith's metal bedframe in the photographs looked identical to the one in his own room. In the worst dreams the two beds became the same bed, the bed of a murdered girl. One night a sentence arrived, spoken by no one: "Meredith did not die in three minutes; she died in three years." The meaning never clarified itself. The morning after that sentence he phoned Caritas and begged them to remove the bed at once. Then he walked, crying, to the German police station and asked for a London number where he could report... something. The officers told him to calm down and go home. Dreams, nothing more. Yet every academic, Tim insists in the book, carries the duty to warn students about safety, even when the threat arrives disguised as a semester abroad, even when it slips into the bedroom at 3 a.m. wearing the face of a girl who only wanted to study

Italian.

6.4 2011 - Bob Rood

Are We Alone?: The Possibility of Extraterrestrial Civilizations is a book written by Robert T. Rood.

Prof. Bob Rood was one of Tim's collaborators, Professor at the University of Virginia. He passed away while flying to Bogna at the airport on November 2nd (Defunct day). It is not a real synchronicity, however, I found bizarre the expiration day. Life may reserve many joke even at the last minute. And a perfect symmetry of numbers – 11/02/2011.

6.5 2013 - A radio secretary

In 2013, the death of the MPIfR secretary was announced to Tim a week before it occurred: "I need a new assistant."

Tim used to see the secretaries of the Institute every day, when at around 11 they would gather together in the library for a cup of coffee. One Monday, Tim met her in the corridor, walking with open eyes (but asleep) and going a bit left and right (not walking straight). He felt that something was wrong with her.

Tim spent the entire weekend at home, crying because there was mourning inside his head. Only on Monday morning, back at the office, he read the email about the passing away of the secretary. She had gotten something in her head while sleeping, probably in the login of renewing the Institute.

6.6 2013 – The Stabbed Pharmacist

A friend in Portolano, NY had given Tim a book about Sicilian life in Portolano. It is a cult book: *Mount Allegro*. Tim read it many years later, in 2013, while living in Germany. Again, intriguingly, he noticed a few synchronous events.

On November 21st, 2013, Tim read a chapter of this book aloud to his mother, just to entertain her in a pleasant way on the telephone. The pages he had read were describing a murder in a shop, committed with a knife. That evening his mother phoned back, alarmed, because a similar event had just happened in Blufi.

A few weeks later, Tim read a few more pages of the book to his mother; this time an explosion was described. Tim found it interesting that on that

very day, the supply rocket headed to the ISS had exploded, the first ever from SpaceX.

Can it ever be that books have an impact on reality?

Oppenheimer read the Bhagavad Gita in the original Sanskrit, and later he cited it as one of the books that most shaped his philosophy of life. "Oppenheimer was overeducated in those fields, which lie outside the scientific tradition, such as his interest in religion, in the Hindu religion in particular, which resulted in a feeling of mystery of the universe that surrounded him like a fog. He saw physics clearly, looking toward what had already been done, but at the border he tended to feel there was much more of the mysterious and novel than there actually was ... [he turned] away from the hard, crude methods of theoretical physics into a mystical realm of broad intuition." Isidor Rabi

6.7 2016 - Sagamihara

What really had happened that evening? Tim had spent some time reasoning about all that had occurred and those invisible voices. It could be paranormal, or perhaps a new technology in the hands of bad actors, even terrorists. Maybe all those conspiracies about mass control were real.

Thinking this, he grew emotional at the thought that some human beings were being manipulated mentally, reduced to mental slavery. He cried for more than an hour. Then, considering that it could all be true and not merely a desperate fiction in his brain, he started to think he might be in danger.

The campus was pretty safe, with guards at the entrance. Nevertheless, that evening, frightened, thinking that Manchurians exist, he decided to take the biggest kitchen knife he had and slip it under his mattress.

The morning after, he was shocked again by the newspaper. Someone had killed 19 psychiatric patients in a Japanese clinic with a knife (2016-07-25).

6.8 2017 – Kim Jong-nam

Things were still strange. Tim was trying to do his scientific research, but he had to constantly battle against those invisible disturbances, shouts, and noises. That week he kept hearing "lol lol" in his head.

A few days later, on 13 February 2017, Kim Jong-nam, the older half-brother of the North Korean leader Kim Jong-un, was assassinated at Kuala Lumpur International Airport in Malaysia. So of course, Tim found it inter-

esting that one of the arrested women was wearing a T-shirt with the word "LOL" written on it.

6.9 2017 – Playboy magazine, Hugh Hefner

He passed away on September 27, 2017, at the age of ninety-one, of natural causes, in his home, surrounded by family.

That night Tim could not sleep. They kept talking to him, inside his head. The voice was calm and soft. They were apologising for having kept him in California. That free culture of love without limits, the post-revolutionary legacy of the seventies, was not consonant with Tim.

It would be better if Tim went back to the old world, where people were more religious, where he could once again hear about angels and saints, as he had in his infancy.

6.10 2017 - Las Vegas massacre

On 2017, at the beginning of October, while going under the blankets, Tim heard a male voice again, this time softly sayng "Las Vegas". Tim recalled that he had applied there for a post at the University in 2014, but the had rejected his application. Must have been a flash back of that application.

But again that damned newpaper... the day after journals were titling with a massacre in Las Vegas.

In those days, Tim was often hearing in his flat words like "the paper the paper" "UNOOSA UNOOSA"

6.11 2017 – Charles' Final Greetings

Exactly one year after Tim's foot emergency (18/11/2017), he had a strange dream.

Tim dreamed of an old man who resembled the photograph of Charles Manson. The man pointed at his feet and said, in Sicilian dialect, that he could not walk because they were badly swollen.

The following morning, newspapers reported the death of the criminal and cult leader Charles Manson.

In the two weeks that followed, three researcher friends of Tim fell down. All three suffered injuries to their legs or feet, and two of them had to undergo surgery (one in Hefei, one in Torr, and one in Shanghai).

"Things are getting weird," Tim thought.

Perhaps they were three fallen angels, since they had all been kind and friendly toward him. Maybe, if something happens to you, it can also happen in your surroundings, like an old proverb from Torr: "what goes around comes around."

Tim felt horrendously bad. Was somebody eliminating his good contacts? And if so, why?

Why dream of Manson at all? Perhaps because, foolishly, Tim had said that the Mafia was in California while commenting on the death of Riina, which had occurred just two days earlier (17 November 2017).

An unsettling thought crossed his mind: what if the Mafia were controlled by psychics? After all, it was often described as a kind of shadow brotherhood—almost a secret society.

Tim's credit card number had been stolen and used in California in May 2017.

Tim felt as if the universe were sending him a message— perhaps about vulnerability, the loss of support, or karma echoing back.

6.12 2018 – Dolores

Strange things continued to happen to Tim.

He worked long hours at the office and sometimes stayed on campus for entire weeks. Occasionally, especially on sunny days, he would step outside for lunch or an afternoon coffee. There were a few Western-style shops near the campus.

That day he went to the Angelau pub. They were baking bread, and the smell was irresistible: olive bread, cranberry bread. Tim ordered olive bread, but suddenly asked to change it to cranberry.

A sudden voice whispered to him not to choose it: "Please, no cranberry."

He ignored the whisper, took the bag, and paid.

The nonsensical voice continued in the background: "If you take a salad, you act like the Germans. If you take a sandwich, you act like the British." —or something similar.

He dismissed it. He had been working too many hours and was probably exhausted.

Dolores O'Riordan of *The Cranberries* (6 September 1971 – 15 January 2018) died the day after Tim purchased cranberry bread for the first time in his life.

By March 2018, that bread was no longer in production.

Dolores had suffered from severe back pain. On January 22nd, Tim went for a massage and discovered that he too had a serious inflammation in his

back.

Tim could not help thinking that he should never have taken that bread. Still curious about the coincidence, he bought a CD by *The Cranberries*.

He believed that curiosity was never accidental. If you feel drawn to something—interested, attracted— there is always a cause, a hidden link.

Around the same time, he had enrolled in a new health insurance plan, paying a large amount of money (4,000 euros). The application had just been approved, with a letter dated 18 January 2018, stamped by Allianz headquarters in Dublin.

But who was Dolores? What lay behind that extraordinarily beautiful voice?

An angel, perhaps. Or a wounded soul— a woman who, according to public accounts, had suffered years of sexual abuse by a close relative, kept silent for a long time, expressing herself through art and music, and later diagnosed with bipolar disorder after revealing the trauma.

When science cannot explain what you feel or sense, you can only say that you are human.

Tim began reading everything: scientific texts, psychological analyses, paranormal narratives. Anything could be interpreted from multiple perspectives, depending on belief, religion, culture, and environment.

Psychic view:
"Attachments by powerful spirit personalities, positive or negative, can cause patterns to appear on the skin, hair, or even in the eye. These patterns may form symbols or diagrams (sigils). If present on the skin, they can resemble moles or nevi, or appear pale, as if bleached. Some birthmarks may indicate attachments formed before birth." — Psychic, Brice Robert

Psychological view:
"I think I'll probably come back as an angel. I'd like to guide people, guard people going through similar experiences, whisper in their ear, and give them ideas on how to deal with things." — Dolores O'Riordan

Technological view:
Was she subjected to psychological operations? Could that explain her talk of whispering? Did religion merely obscure the truth? would her had been happy in a different culture, like they alway whispered? She was found dead in a hotel room at the age of 49 years.

6.13 2018.03.14 – The Death of Stephen Hawking

That week had already been exhausting. Two individuals had come looking for Tim, and the pressure had not let up. By the time Friday night arrived (9 March), he felt some relief: he had at least finished the first chapter of the Kamenski review on collapsed objects and submitted the paperwork for the WEP.

He told himself the weekend would bring rest.

He spoke to almost no one, not even family, unsure whether it was wise to burden them. He sent only a short message to Concha, mentioning what was happening and asking again about her own experiences (her computer that sometimes switched itself on for no reason). Saturday or Sunday evening (he no longer remembers exactly), his mother rang out of the blue and asked whether telepathy could work through computers. He answered that Stephen Hawking had used a special system, an infrared sensor on his glasses linked to a cheek muscle, not some wireless mind-link.

That night sleep barely came. The room filled with voices again, an unusual crowd of invisible presences around his bed. Among them he recognised only one: the Sicilian female voice he had nicknamed la Sfinge. She kept repeating two sentences, calm and satisfied: "Tyson agrees... Tyson agrees," and then, over and over, "Hai fatto bene, hai fatto bene a fare come dice il CEO, hai fatto proprio bene." (You did well, you did well to do what the CEO said, you did really well.)

Monday morning, 14 March. Tim walked into the office, took the laptop from his bag, and (unusually) sat on the sofa instead of at his desk. He opened the news sites. First CNN: a breaking alert timestamped 04:58. Then BBC. For almost two hours he watched the Stephen Hawking page fill in, line by line. Neil deGrasse Tyson's tribute appeared exactly as the Sfinge had announced two nights earlier.

Hawking had died on the anniversary of Einstein's birth.

Tim sat there staring at the screen, the voices finally silent, the stars suddenly very close.

"Look at the stars, not down at your feet."

6.14 2018 - The Queen's Sister

Tim was working day after day, increasingly in isolation — careful now, cautious, still scared of the chaos his words about conspiracy could create.

He had learned to keep his head down, to publish quietly, to avoid drawing attention.

Among other things, he was still working on his SiO maser paper. It had taken a bit too long — a very difficult piece of work to complete, with the German referee first, asking to extend the text with more analysis. Then, changing his mind entirely, suggesting a different theoretical framework. Back and forth, revision after revision. Lorant had had the same referee and kept also complaining.

Eventually, Tim bypassed the referee and iterated directly with the editor, explaining the situation as diplomatically as possible. He asked permission to trim the manuscript and publish a smaller version — just the data table and essential findings. Archival. Clean. Philipe.

That paper was demonic. It had taken more than a year already, consuming evenings and weekends. He worked on it mostly in his dormitory rather than the office, since it dealt with old datasets, observations from years ago that no longer fit anyone's current priorities.

And every time—*every single time*—he opened the files, the disturbances began.

The usual voices arrived immediately. He would hear what sounded like George's voice calling his wife by name: "*Connie... Connie...*" Soft, affectionate, domestic. A voice that had no business being in Tim's head, thousands of kilometers from the Netherlands.

Any mistake or error Tim found in the data would trigger a response from the walls—literally, the walls of his small room seemed to answer him. "*Bene,*" they would say in Italian. "*Sono contento.*" Good. I am pleased.

There was a palpable, demonic opposition to that paper, as if publishing it would somehow violate an unspoken rule.

Initially, when Tim had expressed his desire to publish the old dataset, every Dutch colleague had agreed — or at least hadn't complained openly. But then Mark had mentioned Martje Seventeen during one of their email exchanges, and suddenly the conversation expanded to include some other Australian woman Tim had never heard of.

Suddenly his simple archival paper could become a potential competition with a much larger ongoing survey led by Americans. No, no.

Was this real opposition? Or was it just the voices in his flat, creating phantom conflicts? Which parties were actually involved? In Vietnam, Tim had noticed, most of his colleagues were quietly politically active — careful, strategic, never saying anything directly but always aware of institutional bypassing functions.

But he had also learned something important there: if you do the work

yourself, if it is your own creation, and has useful content, nobody can actually stop your right to publish.

Days were long that spring. May slipping into June, the heat building.

Tim had developed a new routine to improve his dailylife. He would stop working in the office at 17:00, walk back to his dormitory for an hour of English karaoke — seriously, full volume, singing along to YouTube videos to improve his pronunciation — and then restart working after dinner.

He had also rearranged the flat, creating a proper studio in the little room. A desk, a comfortable chair, good lighting. Just outside the room, in the entrance hall, he placed a small coffee table and another chair.

The voices had opinions about this too, naturally. They suggested, almost helpfully: "*Yes, put the table outside the studio. Take your coffee there, like at the doctor's office. When you are outside the studio, you are the patient. Inside the studio, you are the doctor.*"

Tim found this oddly comforting. A way to compartmentalize. Inside the studio: he was in control, productive, the scientist. Outside the studio: he could acknowledge the strangeness, the vulnerability, the sense of being observed and analyzed.

Inside the studio, Tim worked and sang (Dolores, Whitney Huston songs, and Royals by Lorde). Around 17:00, during his karaoke hour, he would often receive calls from Ornella — his Italian-Australian friend phoning from Melbourne to complain about life and everything that had gone wrong. She had been fired as "surplus" from an airline company and was struggling to find new work. She was bitter, angry, accusing everyone — even old housemates from Bogna days — of contributing somehow to her current misery.

She had grown up in Sicily with her grandmother, her mother having already emigrated to Australia. After studying at the University of Bogna, she'd followed her mother to Melbourne. Now she was so bitter about everything, even though — Tim couldn't help thinking — she was still earning 4,000 dollars a month.

How strange, he thought, the way people handle their grief, the way past wounds resurface and color everything. She was definitely not the yoga type—not the kind of person who could let things go, who could find peace in the present moment.

Day by day, the ritual continued. Inside the studio: "you are the doctor." Outside the studio: "you are the patient."

Tim could not understand — it didn't make sense at all, but after all, every person has to take care of himself somehow. We all develop our coping

mechanisms, our little rituals to maintain sanity.

With enormous psychological effort — fighting through the voices, the sense that invisible forces were opposing him — Tim finally completed the maser paper.

He posted it on astro-ph to appear on June 6, 2018.

That same day, there was other news.

Inés Zorreguieta, the younger sister of Queen Máxima of the Netherlands, had been found dead in her Buenos Aires apartment. Suicide. She had hanged herself.

"*Clearly the patient had lost,*" Tim thought, and immediately felt guilty for thinking it.

Inés Zorreguieta was known in diplomatic circles and WHO networks. She was a psychologist, a singer, someone who had struggled publicly with depression. She had written her doctoral thesis on "*Gender differences and their relation to suicide and related behaviours.*"

The irony was unbearable. She had studied suicide academically, professionally, and then —

Tim found it psychologically complex, almost impossibly so. He kept his habit of trying to cross-correlate everything, searching for causation in synchronous events, trying to make sense of the pattern.

His mind worked backward: The PhD was the problem. By repeating his own PhD work through this maser paper, had he somehow imposed a parallel onto Inés? Had he forced her, through some invisible mechanism, to repeat her own thesis work? To revisit the very subject that had presumably contributed to her depression?

It sounded insane. He knew it sounded insane.

But the coincidence was too precise. June 6. The day his paper appeared. The day she died.

Tim remembered the big celebrations in the Netherlands in 2002, when the Argentine beauty Maxima Zorreguieta married Crown Prince Willem-Alexander. The entire country had celebrated — a fairy tale, a modern royal wedding, hope and glamour.

And now this. The sister who stayed behind, who studied death, who understood psychologically what drives someone to that final choice.

All of it could be coincidence. Probably was coincidence.

But any coincidence, Tim believed, is communicating something. Every synchronicity is a message we're supposed to decode, even if we don't want to.

When Tim talked to George on the phone a few days later — a routine check-in about some administrative matter — he learned something that made his stomach drop.

Connie, George's wife, had been in a clinic for psychological distress. For weeks, apparently. George's voice had been strained when he mentioned it.

But, George added quickly, she was getting better. Improving. The treatment was working.

Tim hung up the phone and sat very still.

Inside the studio, you are the doctor.

Outside the studio, you are the patient.

What happens when your heard words seem to echo in the lives of people thousands of kilometers away?

Tim didn't have answers. He only had the pattern, repeating, insisting, refusing to be ignored. Every action has an opposition, and to win the willingness must the bound to your soul.

He closed his laptop and went for a long walk.

6.15 2019.03.03 – Francesco Lo Coco

On March 5, 2019, the news reported the suicide of Dr. Francesco Lo Coco, which had occurred in Rome on March 3. A few days earlier, Tim had received a clear incoming signal in his flat, with someone screaming that name. Tim had indeed become irritated and even screamed loudly that he did not know anyone by that name.

Francesco's death stands as a warning about the dangers faced by Italian research. He had more than 300 publications and had fully cured one type of leukaemia.

Tim read the news and thought that he had clearly been instigated and eliminated from the inside. When hearing the room voice, Tim had also felt a kind of signal expressed as a skin sensation — the same signal he had felt in the *Leon the Boy* case.

6.16 2019.03.14 – Leon the Boy

Tim cried a great deal during his time in Torr (2013–2015), isolating himself in his room in Ippendorf and shouting at the walls as they talked back to him. He would often accuse the voices of being Nazis and promise to call anyone with money or power to help him fight against them. Even the mafia could help against Nazis, he reasoned—just like during World War II. Tim

would ask the Gambino family to build a satellite—to kill them, to beam them, to speak into their heads the way they had done to him.

On March 14, 2019 — exactly one year after Stephen Hawking's passing — Tim went for his walk a bit late. He had read his emails at home and eaten brunch, so when he entered the office it was about 12:30 Vietnam time.

Suddenly, Tim felt drops touching the skin on both arms, followed by a small tremor in his body, and then a male voice saying, "Now you have to eat in Vietnamtown."

Tim shouted back very loudly, "Why? What happened in Little Italy?" Then, noticing that the door next door was open, he sat down and began to work in silence.

Around 7:30 p.m., before leaving the office, he opened his browser to the Italian newspaper *La Repubblica*, which was reporting the killing of Italian Gambino boss Leon Cali.

The NYPD had received a 911 call reporting shots fired and an assault at approximately 9:20 p.m. ET on March 13, 2019. This corresponded to approximately 9:20 a.m. the next day—March 14, 2019—in Vietnam.

In his flat, Tim had heard a voice repeat several times: "Leon non lo devi vedere più, non lo devi vedere più." ("You must not see Leon anymore, you must not see Leon anymore.")

In reality, Leon Cali, known as "Leony Boy," was murdered on March 13, 2019, outside his home in Staten Island, New York. He was the acting boss of the Gambino crime family at the time. Cali was shot multiple times around 9:20 p.m. ET after being lured outside his residence. The perpetrator, Anthony Comello, turned out to be a troubled 24-year-old with conspiracy-theory beliefs. Anthony was the boyfriend of Leon's niece, and he had been forbidden to go out with her.

Leon was born to Sicilian parents from Palermo and married into the powerful Inzerillo clan. His assassination unfolded as a stark, almost operatic tragedy rooted in ancient codes of honor, family loyalty, and forbidden love. *Per la nipote.*

6.17 2021 - My collaborator Simon

It was the holiday (25-February-2021), the Chinese New Year break. Everyone was at home with their families, and the empty office building stood cold and silent.

Tim spent most of the day in his dormitory, the heater running to fight the freezing air. That morning, Tim could not wake easily. His head felt heavy, as though someone else was inside it. He cried for hours, begging the

presence to leave – or otherwise to kill him. But the male voice remained, speaking of a beautiful funeral they should prepare. He described it in detail: a violet funeral, filled with flowers and songs, everything bathed in violet. Tim knew the color was often associated with domestic violence awareness and childhood sexual abuse, and the thought unsettled him deeply.

Around one o'clock in the afternoon, Tim forced himself to rise. He ate a late brunch and walked to the office. The cold was biting, and the building was deserted, all doors shut. Inside his office, still wrapped in his winter coat, he switched on the computer. He could have done the work from the dormitory – why had he come here? Perhaps only to print something. There was an email from the AAS Journal, a report about the spectroscopic data paper – the "American paper," as the voices in his skull whispered. Tim did not read it. He gathered everything and walked back to the dormitory.

After dinner, Tim remained seated at the table. Around ten o'clock, his phone chimed with a notification. It reminded him that he had to read the AAS report and forward it to his collaborators. But as soon as the phone clicked, a male voice filled the room, saying something like "u proposal." When Tim opened his inbox, he found a forwarded email from London: that day, early in the morning, his colleague Simon had suddenly passed away.

The thought struck Tim – Simon had coauthored several papers with Russian colleagues. Tim was scared and did not forward the message to anyone. He stayed inside his flat for two days, and eventually, he deleted the email.

6.18 2021 - Sophie

It was 31 January 2021, and Tim could not wake up. His head was full of noise and screams. It was almost lunchtime when, tired like a soldier, he got up. In the confused chaos of his head he had heard about a moon eclipse and somebody who had to do like him. Nonsense again, words and words...noise. However, the press reported that day that the Greek singer Sophie had suddenly passed away, falling from a rock while trying to look at the moon.

6.19 2015 - Lyme infection

29 November 2018 I went to To Germann doctor to check my borellia Nothing more for a while. Maybe medicines work. Intake of DHA hormone.

Chapter 7

The global net

7.1 2011 - My Friend Andrea

Tim woke up in the middle of the night, still shaken by vivid dream images: an open balcony, curtains billowing in the dark, a wave of pure terror, and an unshakable certainty that this was Andrea's house. So he decided to reach out to his old American friend. She had taught at RIT for many years and was also a yoga instructor. She had spent some time working in Estonia or Lithuania — he couldn't remember exactly which. She had spend some time in Amsterdam and she loved Europe.

11/28/2011
Dear Andrea, How are you? Coming to visit Europe soon? I would love to host you. I had a strange dream—I dreamed that you weren't feeling safe in your house. Strange dreams... but a good excuse to get in touch with you. How's your new year going? Teaching? With a lot of hugs and kisses, Tim
Her reply came quickly: *Tim, so nice to hear from you. My house was broken into and someone tried to attack me. Did you REALLY have that dream? Did you read about it on my Facebook page or hear it from someone before you had the dream? Are you in France? Hugs, Andrea*

They exchanged a few more messages about a year later, in 2012, but the real conversation didn't pick up again until Tim moved from Germany to Vietnam in 2015. Eventually they spoke on the phone, and she told him the full story. A stranger had broken into her house. She heard noises downstairs and the cat's alarmed reaction, so she locked herself in the bedroom and escaped through the balcony. When she went back inside later with the police, the garden door and bedroom door had been forced open, and there

were stones scattered across her bed. What struck Tim hardest was the timing: the attack had happened in September 2011 -— two full months before he sent that email. She was in the process of selling the house to move abroad. Tim pulled every string he could, contacted people in the English department, and managed to arrange a job offer for her. She turned it down and chose instead to move to Berlin for a PhD. In 2017 she came to visit Tim at his mother's house. He had been looking forward to seeing her, but the reunion felt off from the start. There was a kind of internal resistance coming from Andrea -— she complained constantly, accused him of things like not driving gently enough and making her neck stiff, and even asked whether he intended to keep living the same way, just waiting around to die or something like that.
"I hope you weren't harmed"
Tim had noticed other strange coincidences too. For instance, right after their long phone conversation from Vietnam, someone used his credit card for an unauthorized purchase at a Californian winery and drained some money.
"Did the people who used your card buy wine or concrete, or both?"
And then in 2018 came the big Cambridge Analytica scandal, with revelations about how millions of Facebook profiles had been harvested without proper consent, along with questions around data backups and privacy breaches. It made Andrea's earlier questions -— "Did you read it on my Facebook page?" -— feel even more unsettling in hindsight.

7.2 2012-13 - Margy's stairs

Tim was sick of the invisible chess game being played around him. He wanted out. One ordinary morning, he pulled into the parking lot at work. Still sitting behind the wheel, engine off, he suddenly heard a voice — perhaps speaking Italian — discussing ways to prevent him from continuing his job. They could go after him, or after his family, or interfere with his closest collaborators to make them abandon the project one by one.

Already hallucinating at 10:30 a.m.? He was bone-tired. How exactly would they force collaborators to quit? he thought. The voice replied without hesitation, as though the question had been spoken aloud. "For example," it said, "we could make them fall down stairs. Distract them inside their heads while they're walking."

The following morning, when Tim entered the institute, Alessandra intercepted him in the main hall. The previous evening Tim's postdoc — Margy — had fallen down the institute staircase. Alessandra had rushed her to the emergency room. A badly twisted ankle, fortunately nothing broken.

7.3 8 August 2013 – The Garden Fall

On August 8, 2013, Tim was alone, working from the flat while his landlord was away on holiday. He had been asked to water the garden. As he stepped backward, carefully uncoiling the twisted hose, a sudden interference of words were heard, intrusive fragments. The distraction hit at the worst moment and his foot slipped. To avoid cracking his head on the stone edging, he twisted violently, throwing his weight onto his left leg.

Pain exploded in his knee. A ligament tear, he would later learn. At first he couldn't move at all. No one was around; it was late afternoon, the street quiet. Slowly, he dragged himself upright and limped back into the flat.

For the next three days he stayed in bed, knee packed in ice from the freezer, surviving on ready meals thawed from the same appliance. He barely left the mattress.

By the following Monday the swelling had eased enough for him to drive to the doctor with his knee brace from Amazon.

What unsettled Tim most wasn't the injury itself, but what happened during those three immobile days. He kept watching YouTube videos about Ingo Swann, the telepathic pioneer of the Stargate Project. The very first one he clicked on described a physical ordeal: a man climbing a cliff, then falling backward in three steps. The body halts mid-fall. Duality of body and mind — the separation, the observer watching the observed.

Tim had been to Baltimore in the summer of 1998, taking the bus alone to the American Visionary Art Museum — the most extraordinary museum he had ever visited. He hadn't known then that Ingo Swann himself had helped found it, or that his cosmic paintings hung there. Tim returned to Baltimore once more, in 2008, by car, for a single day, just to see the museum again. He still remembered the jacket that wild, eccentric woman had spent her entire life decorating, thread by thread. What a strange coincidences! Also of dates, Sharon Tate had been killed in the night between 8 and 9 August 1969.

How dangerous it could be, he thought now, to pay attention to noises or voices. Always wear proper tennis shoes, something with grip. Watch your step. The invisible could strike without warning; you had to stay grounded, stable. We have to learn to heal both body and spirit. Since 2011 the insistent voices had repeated the same lesson: we are made of four parts—body, emotions, brain, and soul.

The voices were stating that Mark was never a true scientific collaborator. Their topics didn't overlap; they could never really discuss spectral lines. The connection had always been emotional — rooted in Mark's coma, his illness. The voices had pushed Tim to return there only to cut that link forever. Tim

felt manipulated. He refused — stubbornly, insistently — to listen anymore. Mark was a good friend. A real collaborator, no matter what the voices claimed.

7.4 2016 – With One Foot in Canberra

Tim was thrilled about the upcoming trip — his first to Canberra. He had secured an oral presentation at the conference, a rare chance to present his work Down Under.

But just days before the flight to Australia, his right foot swelled dramatically. The pain was sharp and unexplained.

Around that time, at night, a male voice echoed in his room: "In Australia, there is Echelon."

Tim had read about it online years earlier — a shadowy global surveillance network run by the Five Eyes alliance (US, UK, Canada, Australia, New Zealand). The Australian node was at Pine Gap, near Alice Springs: a joint US–Australian signals intelligence base that intercepted satellite communications. Conspiracy circles called it part of mass surveillance, keyword-triggered monitoring of phones, emails, faxes. Tim recalled vague reports of France sending delegations or lodging furious inquiries in the late 1980s and beyond, suspicious that their companies and diplomats were being spied on for economic advantage.

For a fleeting moment, he wondered: Could stupid spies really have attacked his foot? Sabotage to keep him away? It sounded absurd, yet the timing felt too precise.

On November 18, 2016, a Chinese doctor prescribed antibiotics—perhaps an infection, perhaps not—and Tim went anyway. He packed heavy painkillers and boarded the plane.

The conference was beautiful: sharp talks, good company, stunning Australian light. The only disappointment was missing the group walk with colleagues—his foot throbbed too much to join.

The chatter about Echelon didn't surprise him. Whispers of it had echoed in Torr and still reverberated in his mind—those insistent voices, the acoustic oddities. Long before, while working in Torr, he had started devouring everything he could find on strange acoustic phenomena: unexplained sounds, directed energy, the boundary where physics met perception... and among them, ECHELON.

After all, Tim was a bit alienated and distracted. Sometimes he heard—or imagined—strange things. When handing his passport to the Australian border police, he suddenly started laughing. In his head, the officer had said,

clear as day, "Qui non c'è salsiccia." ("There's no sausage here.") He bit his lip to stop, but the laughter bubbled up anyway.

7.5 2018 - Lunar eclipse and portraits

On the night between 30 and 31 January 2018, a marvellous lunar eclipse occurred. Tim watched it while riding his bike toward the dormitory. Nice, very nice!

That same day, Tim had a vivid dream of a cold lake and a female individual with a round face, nicely dressed in a winter coat (beginning of 1900s) smiling at him. A voice suggested that it could have been Maria Mitchell (but it did not appear so from the images retrieved). Strangely, this image was not framed.

Tim had seen two other rectangular framed images popping up during his quiet sleep in 2011: two static pictures of Paola and Gunther (two friend astronomers). Just a few months earlier than the eclipse, Tim had broken his portrait standing on the wall—he did not want to be framed any longer. Below that picture there was the old Einstein picture Tim used to hang on the wall as a PhD student (2002-2004). He put it all in the trash.

Strangely again, on July 2nd, 2023, he saw two more pictures popping up in his mind—round photos and not framed this time. Two old Italian friends in Baltimore, medical doctors at Johns Hopkins. But he had lost contact. From squared to roundish.

7.6 2018 - Memorial Day

Monday, May 28th 2018, Memorial Day.

Tim was wearing his beige pants when a voice started repeating the name of his African-American friend: Viola. They had met in Portolano while he was buying a futon. A psychology student at Portolano University, she loved Europe, having spent a year in Amsterdam.

The shouting began again. He felt drops on his skin.

Then, suddenly, he calmed down. More rationally now, he thought he could simply phone her. He dialed the number and reached Viola at the hospital.

Her stepfather had passed away twenty minutes earlier.

Chapter 8

Medical issues and paranormal

8.1 Explanations and questions

When certain facts occur and logic can't explain them, you can only write small records and wait. Time and statistics may clarify later. In a YouTube interview, Lyn Buchanan — the famous remote viewer from the Stargate Project — talks about a "sharing of properties." When he links to an individual, he can experience their physical sensations. Meanwhile, the individual can experience his. Was Tim connected with a psychic? Buchanan also demonstrated that he could alter blood pressure in other individuals. Of course, he did so to improve their health status.

Or was some new technology at play?

In some dreams, Tim recalled hearing that poor countries do not have good hospitals and doctors. So, by transferring symptoms to individuals in wealthier nations, medical professionals could learn how to detect and cure certain pathologies.

The logic was chilling in its efficiency — and its cruelty.

One day, Tim started crying that he had too much pain, that it would be better to die. The voice answered back that they would make him used to the pain of the big moment. It would connect him with people who were passing away.

8.2 2011: My father's hunt

Tim had just moved to Torr. The happiness of being in his first flat lasted only a few months. Then the voice-to-skull started. One day he was phoning his mother. The phone was still ringing, no one answering, when a female voice began speaking—close to the phone, or inside it. An invisible voice

stated: "You mother is not at home, she is traveling on the highway, to return home after the funeral." When Tim finally reached his mother, he could verify everything was real. His father had passed away, and they had attended the funeral of "zia Giuseppina." Weird. All of it was weird. Accusations followed: he had purchased a house in the wrong city. "You have to buy the house for your mother in the home town, not where you work." But Torr was perfect for housing and investments. Tim had also heard voices talking about faraway cousins who were finance officers (the nephew of "zia Giuspina"), one of them abroad (USA, then Germany).

Hallucinations that can materialize? Or surveillance? GPS can localize a person.

8.3 2011: The shaking arm

Sitting on the sofa, Tim felt a muscle in his right arm begin to shake. It moved automatically, uncontrollably. He removed his shirt and kept watching, mesmerized by the involuntary tremor. Meanwhile, the phone rang. His mother informed him that Marco —- the brother of his brother-in-law —- had to undergo minor surgery to remove a cyst from his arm. Tim hung up, speechless. After a moment, he called back. "Was the cyst on the right or left arm?" he asked. The right arm. The same arm that had been shaking uncontrollably. Eventually, after the removal, the doctor delivered concerning news: it wasn't benign. Marco worked for the Guardia di Finanza—Italy's financial police.

8.4 2015: Cervical polyp

If you have never had a child, sitting in that chair while a gynecologist removes a cervical polyp can be quite painful.

At home, Tim's sister went immediately to rest. Tim prepared some warm tea for her.

During the night, Tim experienced another mental connection — quite noisy this time. A male voice demanded to know why he had removed the polyp, insisting that it was his little child and had to be kept.

A few days later, drinking a beer with his friend —- a psychologist -— Tim heard that Afghan women are often not allowed to visit a gynecologist.

8.5 2016-2019: Damiana

While in Vietnam, not sure anymore when (2016-2019), Tim was going to bed and while wearing his pijama he touched clearly a huge ball inside his belly. He was very worried. The morning after the belly was flat ... the same day the mother phoned him and informed that the "za Viana" had a tumor of several kilograms in his intestin and was going for a surgery.

Damiana was my neighbour till I was 3 or 4 years old. I visited her often. She recall me screaming all the time more than any other child. When I got my PhD or Laurea (not recall very well), she nicely exclaimed that all that shouting perhaps was intelligence.

8.6 2021: May

What would you do if, late at night, already in bed reading, somebody logged into your brain and said, "Your mother doesn't feel well"? It was May 17th—the same day Tim had called the CIA about his credit card. He started shouting loudly through the phone on the floor, then went for a beer. He made sure the phone was turned off and went to bed. The next morning, in his office around 10 a.m., he switched the telephone on again. A message was waiting—and it was real. A message from his sister and brother. They were sitting in a car outside the hospital because their mother was in the emergency room. She had fallen ill with cardiac arrhythmia.

Can they cause it with a satellite? Tim wondered. He clearly needed rest. He went back to bed.

Chapter 9

Emails to psychics

9.1 Fallen Angels

[9 : 08 : 45PM]
Keen System Message
Session Started
[9 : 08 : 49PM]
Gaia Mystique
Good evening.
[9 : 08 : 50PM]
Member34044502
Hello
[9 : 08 : 50PM]
Gaia Mystique
How are you?
[9 : 08 : 57PM]
Gaia Mystique
And how may I assist you this evening?
[9 : 08 : 58PM]
Gaia Mystique
Hi.
[9 : 09 : 16PM]
Member34044502
This is my first KEEn chat. It is a bit strange to use a chat.
[9 : 09 : 33PM]
Gaia Mystique
Would you prefer to call?
[9 : 09 : 38PM]

Gaia Mystique
I also take calls.
[9 : 09 : 42PM]
Member34044502
I am not able to use a phone from Vietnam
[9 : 09 : 45PM]
Gaia Mystique
Welcome to keen.
[9 : 09 : 48PM]
Gaia Mystique
Ok, I see.

[9 : 10 : 02PM]
Gaia Mystique
What are the numbers you just sent?
[9 : 10 : 09PM]
Member34044502
I am Italian, and I make typos in English
[9 : 10 : 18PM]
Member34044502
I hope you will able to understand me well
[9 : 10 : 32PM]
Gaia Mystique
What are the numbers you sent?
[9 : 10 : 52PM]
Member34044502
I am a scientist, interested in biophysics too and in telephaty
[9 : 11 : 03PM]
Member34044502
telephone handy
[9 : 11 : 03PM]
Gaia Mystique
Ok.
[9 : 11 : 18PM]
Member34044502
do you have experience in telephaty
[9 : 11 : 35PM]
Gaia Mystique
Yes, I do.

[9 : 11 : 46PM]
Member34044502
Great.
[9 : 11 : 49PM]
Gaia Mystique
You came to me to ask me questions?
[9 : 12 : 24PM]
Member34044502
I need to understand the difference between Natural telepathy or synthetic one.
[9 : 12 : 43PM]
Member34044502
yes, i need the guidance of an expert
[9 : 13 : 17PM]
Member34044502
Ok, no problem
[9 : 13 : 35PM]
Gaia Mystique
Its strange that a "Scientist" would reach out to someone like myself.
[9 : 14 : 02PM]
Member34044502
What is the chance that an angel or spirit would channel with any person around you?
[9 : 14 : 12PM] Gaia Mystique
If you don't mind, I would prefer you go to someone else to test them.. Im not here to be tested.
[9 : 14 : 15PM]
Gaia Mystique
Thank you.
[9 : 14 : 18PM]
Gaia Mystique
Have a good evening.
[9 : 14 : 27PM]
Member34044502
No, I am not testing you
[9 : 14 : 34PM]
Gaia Mystique
Actually, you are.
[9 : 14 : 37PM]
Member34044502
I have fact in this real life

[9 : 14 : 40PM]
Gaia Mystique
Or attempting to.
[9 : 14 : 43PM]
Member34044502
that I cannot understand
[9 : 14 : 49PM]
Gaia Mystique
Fact?
[9 : 14 : 56PM]
Member34044502
people Chinese talking to me in Sicilian dialect
[9 : 15 : 16PM]
Member34044502
and having two level of conversation atthe same time with the physical person
[9 : 15 : 35PM]
Member34044502
the vessel or person
[9 : 15 : 49PM]
Member34044502
is not aware of the higher level of conversation
[9 : 16 : 14PM]
Gaia Mystique
Please break down what you've just shared, in laymans terms. Thank you.
[9 : 16 : 29PM]
Member34044502
I need to learn how to formulate all this to report to a person who can help
[9 : 16 : 39PM]
Member34044502
If you do not want to help, no problem
[9 : 16 : 48PM]
Gaia Mystique
I don't mind helping.
[9 : 17 : 01PM]
Gaia Mystique
Its your mode of transmission that is not resonating.
[9 : 17 : 12PM]
Gaia Mystique
What is it that you would like to understand?
[9 : 17 : 45PM]

9.2 Alan

9.2.1 3/30/2017

Tim sent the following message at 1:20 PM

Alan,

This is Tim. I would like to talk to you, when you have time. I have to solve a little issue and make of it a treasure. Perhaps you are already aware of my email and why. Is anything you can do about it? or is anything I can do? and how?

(no answers)

9.2.2 4/10/2017

Dear Alan,

do you have some tips for me to record voices? Can you suggest a good detector. Before telling all heard stories, I must have three sure proves. I have to protect myself.

How can I record? sometimes it is skull voice, other time it is like sparse voice in the flat. Topic goes from astronomy (trying to circuiting what I do) to terrorism. I have had terrible premonitions on terroristic acts.

Can you send me some link ? to study scientifically what can be? and how to get science evidence?

I will try to summarize some of the fact that appear more convincing soon.

Tim

(no answers)

9.2.3 4/14/2017

Hi,

Sorry to disturb you again. Here it is a possible evidence dated 2011. I dreamed that a friend was attacked ...it was real. A man entered her bedroom and she escaped from the balcony. The point is that those are communications to me. I am not telepathic at all. This happened in Portolano, (NY). But, from 2011 to 2015 I was in Torr, Germany. I will try to put together more evidence...and then will try to fix an appointment with you. Happy rest and holiday (whatever religion you are). Tim

9.2.5 more

Dear Alan,

I was looking for an anonymous number to contact services in UK. But that it seems that does not exist. Well, I want to simply report the fact of which I have been informed by a psychic related to UK (but, I never know what is real or not). The first fact is about Meredith Kerber the student

killed in Perugia Italy, her killing is related to brain reading. The same story for the italian Reggeni, student in UK, killed in El Cairo in February 2016. A psychic with a very British accent talked to me about Kerber for the whole summer 2012. He asked me to improve the security of my house and to get rid of my metal bed. He was screaming that Kerber died after 3 years and not 3 months. For Reggeni, it is a different situation. I was already in Vietnam then. For about two months (november December 2015), somebody was playing in my mind the same record day after day. A screeming Italian voice about trade unions, communists, and spies. I traveled to Italy on February 5th. That day flying on the airplane, I was trying to sleep and recall of talks about tortures. At my parents place as soon as I arrived I learned of Reggeni case on tv. My mind assumed a clear relation among the virtual tape and the crime.

Hope this is useful to your investigations.

9.3 2017 - Konstantin

4/5/2017
Prof Korotov talks about telepathy experiment and mind to mind set. He is a Prof. at the Tech University of St. Petersburg. I did feel nervous and want to do something, e.g. I wanted to contact Korotov to talk with him about terrorism and victims and prevention.

On April 3, I was just talking to some colleagues about those feelings and concerns about Universities and terrorism and safety. I did mention Prof. Korotov as a possible contact to help. Later in the same afternoon, we heard about the blast in St Peterburg at the metro station of the Tech University.

Just a coincidence, I guess. But, a warning as well. How can we prevent those blasts. Why this metro station? (I guess the most central).....

Best wishes with your job and crime prevention

Bye bye Tim https://www.youtube.com/watch?v=LFSRTsLOiv0

https://www.youtube.com/watch?v=LFSRTsLOiv0 go to 1:18 minutes

9.4 2023 - Lyn

May 4, 2023
Hi,

I am impressed with your experience in supernatural events and telepathy. It is already 10 years, I am used like a receiver by somebody.

In your youtube course, you say that nobody can do anything about it, but I have to fight psychically myself to win them. I would like to get some psychic self-defence classes.

Is any class already available on youtube or (if it is at a low price) that I can register?

Cheers,
Tim

Chapter 10

Cyber-attack and security

10.1 2012: the boss of Duisburg

That they were being surveilled was clear to Tim. His landlord was laughing and saying that he was right, and the only hope was to move to Costa Rica. He repeatedly heard in his skull a voice talking with a Calabrian accent, over and over, for many weeks. There was always a metallic noise too, like a metal bed frame. Tim doesn't recall the content—perhaps he didn't listen to it at all. What the hell was going on? Was somebody checking if he could understand the content? Was he being used as an asset to decode that noise and conversation? Sebastiano Strangio was a fugitive ('latitante') wanted in connection with the Duisburg massacre and related crimes. He was arrested on April 20, 2013 in Piemonte. He was found hiding in a garage where he had been living in secrecy for years to evade capture. After the news broke, the voice in his skull stopped.

10.2 2013 - Snowden

Well, Edward Snowden is now an iconic figure of an anti-government patriot who wanted to tell the truth to the entire world about surveillance. He had been a CIA agent and then moved to the NSA. In a public interview, he stated that an old agent had told him that there was a bit of dirt in the NSA. So, when he got hired, he acted with his internal command to re-establish order and clean it. He was a naive guy thinking that he could save the world.

Months before the Snowden scandal, Tim was waking often in the middle of the night imagining that he was discussing data backups and how to safely store them. Better to move with backups and be independent of any computer. Tim had always been obsessed by data and storage safety.

At the beginning of that June, he was in Bogna for a talk given on June 6th at the University of Bogna. In the afternoon, he walked to the mathematics building to be picked up for dinner with friends. He walked there with Dalia. Suddenly he mentioned to her that they were surveilled and that it was a transatlantic affair. He continued during dinner to talk about the content of his voice skulls. Some friends compared him to the great Socrates and they started laughing and drinking.

In the middle of the night, around 3 a.m., he woke up hearing a voice saying: "now you have a big witness." Tim checked the house — his friend was still outside, and nobody was there. The morning after, walking through the city to return to the University, he saw big news in the press about Edward Snowden.

That sort of psychic link he felt with Edward continued for a couple of years. Tim would wake up again and again because voices were asking him to go and report in Berlin. One night, Tim started crying, tired, and said he never would go to Berlin. Again, a few days after, the German Green Party was reporting that Snowden had refused their invitation to go to the Berlin parliament.

10.3 2013: Boston's bomb

He had just moved to Torr. The W33 paper had been accepted, and finally his request to cover the costs was approved. Mark had to read the paper before approving payment. He found it very interesting, and some time later, he showed me a radio proposal to study the two-velocity issue. That issue became the subject of Katarina's thesis, to be carried out in Boston. I was happy to hear the news, but I didn't know Katarina.

Years later, in April 2013, while walking down the corridor, I would often see a girl wearing a T-shirt from the University of Boston, a pink one. (Later I understood she was Katarina.) While looking at her, the voice was always singing: "This week you are in Boston, this week you are in Boston." After the Boston Marathon bombing (April 15), I didn't hear that voice anymore. The Tsarnaev brothers (the suspects) drove to the MIT campus on the evening of April 18, 2013 and shot a police officer. That same day, Tim had received an email from a colleague (with an Arabic name) about some items for sale. He was interested in an electric transformer (110V to 220V) and would pick it up at night from the office, so he asked Tim to leave the door open. Tim obeyed, but nobody took the transformer. Exhausted, head spinning, he had found another parallel with the news. Probably another coincidence. Better to go for a beer.

10.4 2013 - Two shooting by ISIS

In August the landlord had gone in holiday, and Tim was alone in the house. A few times, he woke up at night with strange sounds. One time he clearly heard a broken window, glasses falling onto the floor. But, the house inspection of the morning after, showed had only been a dream.

Another night, he woke up hearing two gunshots. He sat up in bed and shouted "Padre Dall'Oglio!" It was a dream related to a kidnapped man in Syria, for sure. A few days later (in September 2013), the press reported that Domenico Quirico—an Italian war correspondent for the Turin daily La Stampa who had been kidnapped in Syria—had been released. Domenico had faced two mock executions with a revolver. Was Tim imagining things, or was somebody aware of the negotiations?

10.5 2013: A cannibal policeman

It was already November. Tim was spending his weekends at home trying to reduce the SofI spectra. There was a damned calibration issue. His working hours were interrupted by the usual voices. When tired, he would shout at them. He would threaten to recognize their voices and kill them all. The voices would say that they had the list. Tim was also on the list, and they would eliminate them all. Abruptly, as if seized by a fit of rage, he shouted that he would kill them and put them in a refrigerator. A few weeks later, the news reported on the cannibal love affair involving a policeman in Dresden. Tim perceived a clear link with that case, and peacefully went to bed. By the way, he had already gone a few times to the local police office...but the last voice he heard that night said that from that moment he should not trust the police either. He had to watch out on his own.

10.6 2013: INOUE conference and the radio-police

Excited to go to Mexico for the first time and present his work. He still had pain in his back and was going for massages and doing home stretching exercises. The voices were advising him to take antibiotics before flying, just in case he had an infection (so he did). The flight had a connection in Detroit, and Tim had planned a two-day stopover during the return, thinking he could meet Tiziana. At the last moment, Tiziana had been called to report on her NSF grant during those days. But he left the ticket unchanged. Portolano

was too far for a one-day visit. The conference was beautiful, the talk highly appreciated with lots of comments. But in the room, the old wooden cabinet suddenly started making banging noises. Hmm, strange—like a ghost was there. Tim knew several participants; the conference dinner was delicious. Tim still remembers that tender, soft meat. But of course, as usual, a few strange elements had appeared.

Tim had traveled without the right computer cable, and spent the first day going around through markets, alone, in Puebla to purchase a Mac charger. During one morning break, Tim talked to Nate. To the question "how are you?", he answered "I am sick." Well, it can happen, Tim thought—jet lag and a cold during the flight. At some point, a conference talk was disturbed by a guard's loud radio noise from the door at the top of the semi-amphitheater. The guard moved away. Nate, sitting next to Tim, ran down the stairs and exited the room, and Tim got a sort of electronic shock and his body shook for at least 30 seconds. Wow, what was that! During the conference's concluding remarks, the Jerusalem professor also said, "See you at the next conference. He will repeat." So Tim left the conference a bit confused. Whom? God?

Sally at the conference had suggested Tim use the Detroit stopover to visit the University of Toledo in Ohio where her former student Eric was working. He was the perfect cicerone, bringing him to visit the University and the Toledo Museum of Art. In the hotel room there was a strange metallic noise overnight, like something banging on the Mac cover. Also on the last day, after shopping, Tim had two strange encounters with taxi drivers. One ran out of gasoline in an area that didn't seem so good, and complained for more than an hour about the poor conditions of workers (he was a Black man; he said he would be called at the last moment by the company and given bad cars all the time). In a second taxi, Tim asked to stop at the bank to withdraw some money. A man was leaving the ATM machine right at that moment, and he had forgotten his bank card there. Tim took it and asked the driver to stop at the police station. After a long discussion, he left the card with the driver, who promised to bring it to the bank the morning after. Was all that normal, or another test of trust? Also when entering the States in Detroit, the officer had noticed the visitor entry stamp from 2010 still attached to Tim's passport. Unaware of any problem, he answered the officer, "Can you fix it?" The officer said he could. Anyway, the visit had been pleasant, and he left the Detroit airport again with a cabbie shouting 3-4 times "Buon Natale!" When boarding the airplane, a soldier checked everyone's passport and said hello to Tim.

10.7 2017 - Report of Unusual Experiences, Perceived Threats, and Coincidences Potentially Related to Personal Safety

September 21, 2017 – Draft Email to Italian Police

Dear Police Department,
My name is Tim, and I am particularly worried about the emerging news on what has been called "Havana Syndrome" — the mysterious health incidents affecting U.S. diplomats in Cuba, involving strange auditory sensations, pressure, headaches, and other neurological effects. I would like to suggest the creation of anonymous reporting pages or channels for such phenomena. I believe this is not only an American problem limited to government personnel abroad, and that civilians—we all—may be at risk from similar unexplained events.
I am especially sensitive to these arguments because I myself experience auditory phenomena at times, premonitions (e.g. for the Reggeni murder) along with accumulating coincidences and patterns over several years. I have tried to rationalize them, study the patterns, and they feel significant enough to warrant special attention in light of the Havana cases.
I am concerned for my own safety and well-being, as well as for other citizens who might encounter something similar without official channels to report it.
Regards,
A concerned citizen
Tim

10.8 2018 — National Security of Vietnam

March 8th is Women's Day, a date highly respected in Asia, as Tim had seen in Vietnam. Any woman should be able to defend herself and stand alone.

On March 9th, 2018, Tim was still in his pyjamas in the dormitory when the phone rang, around ten in the morning. A Chinese colleague told him that two individuals were waiting for him in his office and wished to speak with him. Tim answered that he would be there within thirty minutes.

Tim felt strange. Instead of hurrying, he began shouting loudly in his flat. Then he took his computer and started writing messages to friends, as if to secure his own existence.

Here is a crazy world.
It looks like a book by Paul Auster.
I am kept with a phone in my head.
People seem synchronised with what I say or think.
I imagine I am a victim of spies
and wonder what else can happen.
Nothing matters anymore. Nirvana.

Two people come looking for me,
and instead of being happy,
I wonder whether they are Korean or Taiwanese spies.
Leon once told me that in Germany
six out of ten are spies,
but at least they are all German.
Funny feelings.
Have a nice working day.

When Tim arrived at the office, he found two agents from Chinese National Security waiting for him. He served coffee, and they all sat around a table: the two agents, Tim, and Tim's colleague, who acted as a translator.

Tim had lived in New York State before, and in his mind this made everything feel serious. He began thinking that the trigger might have been the recent poisoning of Sergei Skripal. Surely, he thought, they had come to protect him. Finally, someone to whom he could say everything and receive help.

The agents asked whether he liked Vietnam and whether he was happy with his life there. Tim was eager to speak. He explained that the university was excellent and that people were very kind. He was happy to be there; however, for security reasons, he spent most of his time on campus. He told them he suffered from acoustic premonitions and was afraid to go out alone unless necessary. He spoke at length about premonitions related to murders and airplane crashes.

The agents replied that Vietnam was full of clairvoyants and that this was certainly not a problem. If he wished, they could even suggest Chinese doctors in Beijing who worked on such matters.

When asked about practical issues, Tim mentioned problems with his credit card and explained that he had contacted American authorities about it in May. The agents said they understood and noted that they already had a record of calls made in March. They wished Tim well and suggested that he contact them directly if problems reoccurred.

Tim returned to his flat and wrote to friends in Bogna, describing the

unusual day and calling himself a bastard dog — he had smelled it himself — and also wrote to Mark. His head felt tired. He kept replaying every word that had been said, but it seemed that everything had gone well. After all, he was honest, and nothing bad could happen with the authorities.

Still, Tim was not used to meetings. He was easily distracted and began rehearsing the conversation in his mind. The colleague had only translated, yet the agents clearly understood English as well. At some point, Tim imagined the translator speaking directly to him, saying "when he saw—" and Tim adding "the proposal," and the translator finishing, "he got worried." He was too tired. It was time to go to bed.

The next day, Tim met the colleague again and asked whether everything was fine. The colleague answered that such procedures were also applied to students and were quite frequent, and that Tim was free to speak with his embassy if he wished. Nothing was wrong. The agents had simply underlined that Tim should contact them only if he encountered trouble in Vietnam. So Tim went quietly to bed again.

Tim was glad he had been honest and had trusted the local authorities. A few years later, in 2020, a high-profile diplomatic incident occurred in Houston. Some researchers were accused of espionage and intellectual-property theft and barricaded themselves inside the Chinese consulate, which was then closed. It is easy to create diplomatic problems if one does not act with trust and respect for humans — and for countries.

Yet the premonitions and frightening dreams returned. Why had they come precisely on March 9th? The year before, on the same day, Tim had received another visit, this time from a colleague at a nearby university. Would there always be visits on that date? And Skripal — what damned connection was there? Why did his brain insist on recalling these names? Why did he imagine such things during a meeting? He needed to learn how to concentrate.

The voices continued. They whispered that the meeting had been organised by the Taiwanese. It felt like a German repetition — like the meeting Mark had arranged with the city-hall worker. In Germany, they called a psychologist for the worker; in Vietnam, they called the police. Was it real, or was it in the air? After all, the Age of Aquarius had arrived.

When the Moon is in the Seventh House
And Jupiter aligns with Mars
Then peace will guide the planets
And love will steer the stars
This is the dawning of the Age of Aquarius
Age of Aquarius

Aquarius
Aquarius
Georgeony and understanding
Sympathy and trust abounding
No more falsehoods or derisions
Golden living dreams of visions
Mystic crystal revelation
And the mind's true liberation
Aquarius

Tim tried to be rational and to ignore any strange or abnormal happenings. He spent a year locked in his office, writing and checking the entries of a catalog. By cutting down on communication, he felt much better.

Still, any human interaction revealed coincidences.

10.9 March 25, 2018

Kim Jong-un's first trip to Beijing took place from March 25–28, 2018 — it was his first foreign visit as head of state and his first visit to Vietnam since becoming North Korea's supreme leader in December 2011.

On the morning of the 25th, Tim could not wake up. A strong, unbearable metallic noise was inside his head. Tim wrote a quick message to his Institute secretary, saying that he was a bit sick and stayed in bed until 5 pm. Later, when he watched the news, Tim thought that perhaps he had been hearing the train noise of Kim Jong-un. Or did they (but who?) put at rest Tim's head for security?

CIA Director Mike Pompeo made a secret visit to North Korea around April 1, 2018 (Easter weekend), meeting with Kim Jong-un in Pyongyang.

10.10 2018: Münster city

On April 7th, Tim woke up as usual in his Chinese flat. He was naked in his bathroom preparing for the shower when he heard somebody screaming "not in North Rhine-Westphalia!" Well, if he heard it, he heard it, but nobody was there. He entered the shower and turned on the water. Later that same day, news appeared in the newspaper of a van that had driven into a crowd in Münster city. Münster is a nice university city in North Rhine-Westphalia. The driver was a psychopath, the news said. While reading the news, he felt a bit afraid of that coincidence, and concluded perhaps he should not

go to North Rhine-Westphalia. The usual voice started suggesting that now he could go. When a person is not believed and discriminated against... In that region, they have a lot of psychopaths, and perhaps Tim was the only normal one.

10.11 2018-2019: Bartonella

During the six years in Vietnam, the work went fine, and Tim checked every six months for his Lyme infection to protect his health. During any trip abroad, he would book a medical checkup. The doctor in Vietnam had said that they didn't measure it, so Tim was the first person with that illness in the entire region. He could give Tim anything he wanted or the German doctor had advised, but they didn't treat it there.

In the flat though, he would hear voices threatening him about his health status: "If you still have to buy all these vitamins, you better go away." The vitamins were coming from an American online seller. "You are the only sick person here and could infect others." So Tim stopped purchasing vitamins online and only purchased them on each trip. Antibiotics could be purchased at the local pharmacy without problems.

Another blood test result (only Lyme) was received via email in July 2018 or February 2019. Usually Tim did the checkup at the German doctor's office; this time he had it checked at an international American lab. Tim had been testing for it for several years, and the Bartonella and Babesiosis tests came back negative. Upon receiving the email, while re-entering the campus, he took his card to open the gate and looked at the guard. Rather than the usual "good evening," the guard said, singing: "Bartonella." Was that a hallucination? Had he worked so hard the entire day that he was having hallucinations? Still, that was what he heard. Was somebody taking advantage of him, shouting in his head to simulate the Bartonella?

The Lyme infection had occurred in July 2015 while moving to Vietnam.

10.12 2016-2019: Düsseldorf airport guards

During his employment in Vietnam, each holiday season, about three times per year (February, August, and October), Tim would travel to Europe. First Leonfurt for his medical exam, and then Italy. During one trip, he went from Torr to Düsseldorf airport to continue on to Italy. While queuing for check-in, Tim was engaged in a war-conversation with somebody inside his head. Tim didn't want that mental control; he would do everything to find out who

it was and even kill them. The guard took Tim's luggage, looked at it, had a sort of tic in his neck (he quickly turned his head left and right again), and he started shouting "No telephone! No telephone!" Tim, still and serious, calmly asked if he could have his luggage back. Wow, were the military or aliens running this control? Yeah, that's the proof! The control existed—it wasn't Tim's idea. But who is running it? What is reality?

Chapter 11

Havana

11.1 Charlotte and Beth Davies

First blog post: psychic or psyops?

Charlotte Hollis never left her rotting mansion; the world told her she was mad, but the real cutters were the ones who staged the ghosts. Tim started hearing the same whispers in 2011, not from Louisiana swamps but from the walls of an ordinary apartment while the world slept. Was it aliens finally saying hello? Or humans saying stay quiet?

In 2017 the US Embassy in Havana was hit by what they called "acoustic attacks" -— diplomats hearing grating noises from nowhere, pressure in their skulls, then vertigo and brain fog that lingered for years. Some recordings captured insect-like chirps (crickets, said skeptics), but others swear it was directed, invisible. How many ordinary citizens face the same at night, in their beds, while dreaming of starships and voices from Mars? We want aliens so badly we'd believe anything -— but it's far more likely human hands turning the dials.

- Rule number one: Be strong and resist. As an individual, you can be a victim of manipulative psyops. Defend yourself.

- "Because morale is both an individual and group experience, and no two soldiers or individuals are alike, their breaking points are not alike... PSYOPS had little effect on those with exceedingly high levels of morale." (Gilmore, 1998)

- Recall what you heard -— write it down immediately, date it, note the time and your exact state (awake? drifting?).

- Do not be scared to communicate this to others (friends, trusted contacts). Isolation is their weapon.
- Record audio during suspected attacks; use an EMF meter or simple app to log electrosmog spikes in absence and during. Patterns matter.
- Never do what they suggest you to do. Your will is your FREEWILL. Commands in dreams, urges to act strangely—reject them outright. Say aloud: "This is not mine."

If they can beam sounds into diplomats' heads from afar, what stops them from whispering to astronomers scanning the red planet? Or to someone emailing psychics about fallen angels, only to wake them with new "insights"? The sweet lullaby of Charlotte still plays -— hush, hush -— but now it's not harpsichords. Wake up before the music reprograms you, you are the programmer and musician of your life.

11.2 A journalist

17 October 2025

Hello Nick,

This is Tim writing — I hope you are well. I was truly impressed by your investigative work on Havana Syndrome — especially how you explore the mystery from multiple angles, blending technology, politics, and human experience without pretending there's a simple answer. That kind of journalism, on such a sensitive and confusing topic, is rare and brave.

It's frustrating to watch public authorities make confident claims and then walk them back. Too often, official statements about surveillance, health incidents, or unexplained phenomena are hedged, incomplete, or contradictory, leaving victims and the public in the dark.

I prefer to stay anonymous, even though I've told almost everyone I know about what I experienced and seen. Nobody seemed to take it seriously. But I have a long personal history — going back to 2011 — of what I call invisible communications and odd, unexplained events that interfere with my daily life. It reminded me of some of the things affected U.S. personnel have described in the Havana Syndrome reports — cognitive disruptions, disorientation, pressure in the head, and other strange phenomena. I don't believe this has anything to do with extraterrestrials. I believe it's human technology, something not publicly acknowledged but very real to the people

who experience it. In my own case, the sensations and effects feel tied to frequencies — electromagnetic or otherwise — more than anything physical. I can often tell when the effect is present or absent, even if others wouldn't notice it at all. Certain patterns repeat, and the sensations align with when "something seems to be on" around me. That doesn't prove anything, but it's my lived experience.

I've had countless interactions — literally phone call after phone call — trying to demand my freedom back or understand what's happening. In some conversations, I think I've gotten clues about how these systems are used. My feeling is that synchronized communication technologies can influence behavior or isolate a person, depending on how they're manipulated. If someone doesn't behave as expected, they risk being sidelined or ignored. To me, it looks like this may be part of a selection mechanism — the future work environment shaped by cyber, monitoring, and information control.

Maybe these are just my own interpretations, but when I listen to your work on The Sound — how many investigators, scientists, and former insiders are unsure what's real — I feel less alone.

It's time to have honest conversations with younger generations — to question the systems we live within and seek genuine freedom. That, I believe, matters more than any official narrative.

Ciao, and I hope we can meet or talk one day.

11.3 To a layer

. 12 November 2025

Subject: Inquiry and Potential Interview on Havana Syndrome

Hi Mark,

I hope this message finds you well. My name is Tim, and I'm contacting you because I'm working on a book about phenomena that are often misunderstood — whether described as paranormal, intelligence-related, or unexplained health incidents like what many have called Havana Syndrome. I've been following your work on this topic, and I appreciate how you advocate for those affected and push for transparency around these incidents. Your testimony before Congress and representation of victims clearly shows there is more to understand than official summaries often convey.

I am interested in speaking with individuals who have experienced these unusual health incidents for interviews. My goal is to explore the human experience behind the reports — how people interpreted symptoms, how

authorities responded, and what it meant for their lives — rather than to promote any single theory.

Over many years, I've experienced unusual sensory events myself and have read widely about similar reports from diplomats, intelligence personnel, and others who described headaches, dizziness, hearing anomalies, or cognitive issues after being stationed abroad. I understand that hundreds of cases have been reported globally, and that there is ongoing debate about causes, including whether directed energy or electromagnetic stimuli play a role, and how these incidents are documented and compensated.

I also recognize the complexity and controversy surrounding these events. Some official reviews have found no clear evidence linking the symptoms to intentional foreign attacks, while others — including investigative panels and advocates like yourself — have raised concerns about potential cover-ups and the need for deeper investigation. In the course of my research, I've noted the connections you've drawn between anomalous health incidents in locations as diverse as Havana, Vietnam, and Europe, and I would value any perspective you could share on how to approach interviews respectfully and responsibly. Many voices in this space feel they've been unheard, or that the public narrative doesn't reflect the lived reality of those affected.

Thank you very much for your time and consideration. I would be grateful for any guidance or referrals to individuals willing to share their experiences for this project.

Sincerely, Tim

P.S. I am planning to present this work as a narrative book that includes both documented cases and personal voices from those affected, which I hope may eventually be of interest to you as well.

P.S. I've also noticed a pattern in the news over the years — the passing of several public figures under surprising or sudden circumstances — and it kept drawing my attention as I worked on this book. For example:

Dolores O'Riordan, Irish singer-songwriter, died suddenly in 2018 at 46.

Lucio Dalla, beloved Italian musician, died suddenly in 2012 at 68.

Charles Manson, notorious cult leader, died in 2017 (widely reported).

Inés Zorreguieta, Argentine public figure, died in 2018.

Steven Hawking, world-renowned physicist, passed away in 2018.

Ambassador Luca Attanasio was killed in an ambush while serving abroad in 2021.

Steven Rawlings, Reggeni, Francesco Lo Coco, Widney Huston, Sophie, Leon the Boy, Sara Tardioli, Simon .....

These aren't proof of anything, but when juxtaposed with unexplained health reports and anomalous events, they make me question patterns, causality, and coincidence in this world.

Tonight, I saw the recent news reporting two elderly dead during the same football match, or two runners deaths from the same gym, and I decided to restart my book. I thank you very much

Bye Bye Tim

(no answers)

P.S. According to recent news, Michael Beck — the first person to report symptoms linked to Havana Syndrome — passed away suddenly while shopping on 2026-01-31 at the age of 65.

Chapter 12

The marriage

Tim said that the book is over, finished. The last chapter should be blank, still to be filled.
